From Insight to Innovation David P. Billington, Jr., 2020-11-17 The engineering ideas behind key twentieth century technical innovations from great dams and highways to the jet engine the transistor the microchip and the computer Technology is essential to modern life yet few of us are technology literate enough to know much about the engineering that underpins it In this book David P Billington Jr offers accessible accounts of the key twentieth century engineering innovations that brought us into the twenty first century Billington examines a series of engineering advances from Hoover Dam and jet engines to the transistor the microchip the computer and the internet and explains how they came about and how they work Each of these innovations tells a unique story The great dams of the New Deal brought huge rivers under control and a national highway system interconnected the nation as did jet air travel The transistor and the microchip originated in the private sector and found a mass market after early government support The computer and the internet began as government projects and found a mass market later in the private sector Billington finds that engineers with unconventional insights could succeed in a bureaucratic age what mattered were independent vision and a society that welcomed innovation This book completes the story of American engineering begun with the earlier volumes *The Innovators* by the author's father and *Power Speed and Form* by the author and his father
