Francis Bacon: Discovery and the Art of Discourse Lisa Jardine, 1974 A New York socialite who wasn't interested in fortune or fame That was Judy Lovin who valued friendship integrity and her career as a preschool teacher Then her father's business collapsed and his most powerful enemy offered to help but under the condition that Judy would accompany him to a remote Caribbean island as his companion nothing more Since it meant so much to her family Judy agreed She suspected that he was probably a harmless lonely man But she was so wrong She didn't expect to meet a powerful attractive loner who would stun her senses and capture her heart *The Discovery of First Principles*, *History of Civilization in England*

Henry Thomas Buckle, 1877 **An Aristotelian Account of Induction** Louis Groarke, 2009 Through a study of argument science art and human intelligence Louis Groarke explores and builds on a line of Aristotelian thought that traces the origins of logic and knowledge to a mental creativity that is able to leap to insightful and truthful conclusions on the basis of restricted evidence In an Aristotelian Account of Induction Groarke discusses the intellectual process through which we access the first principles of human thought the most basic concepts The laws of logic The universal claims of science and metaphysics And The deepest moral truths Following Aristotle and others Groarke situates the first stirrings of human understanding in a creative capacity for discernment that precedes knowledge even logic Relying on a new historical study of philosophical theories of inductive reasoning from Aristotle To The twenty first century Groarke explains how Aristotle offers a viable solution To The so called problem of induction while offering new contributions to contemporary accounts of reasoning and argument and challenging the conventional wisdom about induction In recovering and developing philosophical ideas that have been largely overlooked or misrepresented by more recent sources An Aristotelian Account of Induction makes a major contribution To The historical study of philosophy and to critical debate **The History of**

Philosophy from Thales to Comte George Henry Lewes, Lewes, 1880 **Shifting the Paradigm** Paolo C. Biondi, Louis F. Groarke, 2014-05-26 Induction which involves a leap from the particular to the universal has always been a puzzling phenomenon for those attempting to investigate the origins of knowledge Although traditionally accepted as the engine of first principles the authority of inductive reasoning has been undermined in the modern age by empiricist criticisms that

derive notably from Hume who insisted that induction is an invalid line of reasoning that ends in unreliable future predictions. The present volume challenges this Humean orthodoxy. It begins with a thorough consideration of Hume's original position and continues with a series of state-of-the-art essays that critique the received view while offering positive alternatives. The experts assembled here draw on a perennial historical tradition that stretches as far back as Socrates and extends through such luminaries as Aristotle, Aquinas, Whewell, Goethe, Lonergan, and Rescher. They inquire into the creative moment of intellectual insight that makes induction possible, consider relevant episodes from the history of science, advance scholarly exegeses of historical interpretations of inductive reasoning, and reflect critically on the scientific and logical ramifications of epistemological and metaphysical realism.

Burchard de Volder and the Age of the Scientific Revolution Andrea Strazzoni, 2019-11-18. This monograph details the entire scientific thought of an influential natural philosopher whose contributions unfortunately have become obscured by the pages of history. Readers will discover an important thinker, Burchard de Volder. He was instrumental in founding the first experimental cabinet at a European University in 1675. The author goes beyond the familiar image of De Volder as a forerunner of Newtonianism in Continental Europe. He consults neglected materials, including handwritten sources, and takes into account new historiographical categories. His investigation maps the thought of an author who did not sit with an univocal philosophical school but critically dealt with all the major philosophers and scientists of his age, from Descartes to Newton via Spinoza, Boyle, Huygens, Bernoulli, and Leibniz. It explores the way De Volder's unsystematic thought used, rejected, and reshaped their theories and approaches. In addition, the title includes transcriptions of De Volder's teaching materials, disputations, dictations, and notes. Insightful analysis combined with a trove of primary source material will help readers gain a new perspective on a thinker so far mostly ignored by scholars. They will find a thoughtful figure who engaged with early modern science and developed a place that fostered experimental philosophy.

Aristotle on Knowledge and Learning David Bronstein, 2016-03-25. All teaching and all intellectual learning come to be from pre-existing knowledge. So begins Aristotle's *Posterior Analytics*, one of the most important and difficult works in the history of western philosophy. David Bronstein sheds new light on this challenging text by arguing that it is coherently structured around two themes of enduring philosophical interest: knowledge and learning. The *Posterior Analytics* on Bronstein's reading is a sustained examination of scientific knowledge: what it is and how it is acquired. Aristotle first discusses two principal forms of scientific knowledge: *epistēmē* and *nóus*. He then provides a compelling account, in reverse order, of the types of learning one needs to undertake in order to acquire them. The *Posterior Analytics* thus emerges as an elegantly organized work in which Aristotle describes the mind's ascent from sense perception of particulars to scientific

knowledge of first principles Bronstein also highlights Plato's influence on Aristotle's text For each type of learning Aristotle discusses Bronstein uncovers an instance of Meno's Paradox a puzzle from Plato's Meno according to which inquiry and learning are impossible and a solution to it In addition he argues against current orthodoxy that Aristotle is committed to the Socratic Picture of inquiry according to which one should seek what a thing's essence is before seeking its demonstrable attributes and their causes Aristotle on Knowledge and Learning will be of interest to students and scholars of ancient philosophy epistemology or philosophy of science
