**Discovering Mars** William Sheehan, Jim Bell, 2021-11-09 For millenia humans have considered Mars the most fascinating planet in our solar system We've watched this Earth like world first with the naked eye then using telescopes and most recently through robotic orbiters and landers and rovers on the surface Historian William Sheehan and astronomer and planetary scientist Jim Bell combine their talents to tell a unique story of what we've learned by studying Mars through evolving technologies What the eye sees as a mysterious red dot wandering through the sky becomes a blurry mirage of apparent seas continents and canals as viewed through Earth based telescopes Beginning with the Mariner and Viking missions of the 1960s and 1970s space based instruments and monitoring systems have flooded scientists with data on Mars's meteorology and geology and have even sought evidence of possible existence of life forms on or beneath the surface This knowledge has transformed our perception of the Red Planet and has provided clues for better understanding our own blue world Discovering Mars vividly conveys the way our understanding of this other planet has grown from earliest times to the present The story is epic in scope an Iliad or Odyssey for our time at least so far largely without the folly greed lust and tragedy of those ancient stories Instead the narrative of our quest for the Red Planet has showcased some of our species most hopeful attributes curiosity cooperation exploration and the restless drive to understand our place in the larger universe Sheehan and Bell have written an ambitious first draft of that narrative even as the latest chapters continue to be added both by researchers on Earth and our robotic emissaries on and around Mars including the latest the Perseverance rover and its Ingenuity helicopter drone which set down in Mars's Jezero Crater in February 2021
