Discrete Field Analysis of Structural Systems Donald L. Dean, 2014-09-01      **Discrete Field Analysis of Structural Systems** Donald Lee Dean, 1976      *Shell and Spatial Structures: Computational Aspects* Guido De Roeck, Avelino Samartin Quiroga, Marcel A.V.A. Van Laethem, Edgard Backx, 2013-03-13

In recent years powerful engineering workstations for a reasonable price become a valuable tool for the design of complicated constructions such as shell and spatial structures. This availability causes an increasing use of advanced numerical techniques for the static and dynamic analysis of these structures also in the non linear range. The I A S S Working Group nO 13 concerned with Numerical Methods in Shell and Spatial Structures and the Department of Civil Engineering of the Katholieke Universiteit Leuven have taken the initiative to organise an International Symposium providing a forum for discussion and exchange of views between researchers specialists in numerical analysis on one hand and designers practising engineer ings on the other hand. These Proceedings contain the papers presented at the Symposium held in Leuven July 14 16 1986. The papers are organised in five sections: 1 Shell structures 2 Spatial structures 3 Dynamic analysis 4 Non linear analysis 5 Presentation and interpretation of results. The papers covering more than one domain are classified following the main subject. We hope that researchers as well as practising engineers will find a lot of useful information in the book.

Large Space Structures: Dynamics and Control S.N. Atluri, A.K. Amos, 2012-12-06. This monograph is intended to provide a snapshot of the status and opportunities for advancement in the technologies of dynamics and control of large flexible spacecraft structures. It is a reflection of the serious dialog and assessments going on all over the world across a wide variety of scientific and technical disciplines as we contemplate the next major milestone in mankind's romance with space: the transition from exploration and experimentation to commercial and defense exploitation. This exploitation is already in full swing in the space communications area. Both military and civilian objectives are being pursued with increasingly more sophisticated systems such as large antenna reflectors with active shape control. Both the NATO and Warsaw pact alliances are pursuing permanent space stations in orbit large structural systems whose development calls for in situ fabrication and or assembly and whose operation will demand innovations in controls technology. The last ten years have witnessed a fairly brisk research activity in the dynamics and control of large space structures in order to establish a technology base for the development of advanced spacecraft systems envisioned for the future. They have spanned a wide spectrum of activity from fundamental methods development to systems concept studies and laboratory experimentation and demonstrations. Some flight experiments have also been conducted for various purposes such as the characterization of the space environment, durability of materials and devices in that environment, assembly and repair operations and the dynamic behavior of flexible structures. It is this last area that has prompted this monogram.
