Disease Mapping with WinBUGS and MLwiN Andrew B. Lawson, William J. Browne, Carmen L. Vidal Rodeiro, 2003-09-12 Disease mapping involves the analysis of geo referenced disease incidence data and has many applications for example within resource allocation cluster alarm analysis and ecological studies There is a real need amongst public health workers for simpler and more efficient tools for the analysis of geo referenced disease incidence data Bayesian and multilevel methods provide the required efficiency and with the emergence of software packages such as WinBUGS and MLwiN are now easy to implement in practice Provides an introduction to Bayesian and multilevel modelling in disease mapping Adopts a practical approach with many detailed worked examples Includes introductory material on WinBUGS and MLwiN Discusses three applications in detail relative risk estimation focused clustering and ecological analysis Suitable for public health workers and epidemiologists with a sound statistical knowledge Supported by a Website featuring data sets and WinBUGS and MLwiN programs Disease Mapping with WinBUGS and MLwiN provides a practical introduction to the use of software for disease mapping for researchers practitioners and graduate students from statistics public health and epidemiology who analyse disease incidence data **Statistical Methods in Spatial Epidemiology**

Andrew B. Lawson, 2013-07-08 Spatial epidemiology is the description and analysis of the geographical distribution of disease It is more important now than ever with modern threats such as bio terrorism making such analysis even more complex This second edition of Statistical Methods in Spatial Epidemiology is updated and expanded to offer a complete coverage of the analysis and application of spatial statistical methods The book is divided into two main sections Part 1 introduces basic definitions and terminology along with map construction and some basic models This is expanded upon in Part II by applying this knowledge to the fundamental problems within spatial epidemiology such as disease mapping ecological analysis disease clustering bio terrorism space time analysis surveillance and infectious disease modelling Provides a comprehensive overview of the main statistical methods used in spatial epidemiology Updated to include a new emphasis on bio terrorism and disease surveillance Emphasizes the importance of space time modelling and outlines the practical application of the method Discusses the wide range of software available for analyzing spatial data including WinBUGS SaTScan and R and features an accompanying website hosting related software Contains numerous data sets each representing a different approach to the analysis and provides an insight into various modelling techniques This text is primarily aimed at medical statisticians researchers and practitioners from public health and epidemiology It is also suitable for postgraduate students of statistics and epidemiology as well professionals working in government agencies **Social Environment and Cancer**

in Europe Guy Launoy, Vesna Zadnik, Michel P. Coleman, 2021-05-31 This contributed volume addresses the link between the social environment and cancer in Europe The authors document the wide range and diverse trends in cancer incidence and patient survival in Europe and they identify the main mechanisms and key influences that underlie these inequalities They

suggest a series of actions and programmes to tackle these inequalities in Europe within the conceptual framework of intervention research The influence of the social environment on the risk of suffering and dying from cancer is obviously a global phenomenon as evidenced by a growing number of studies and books In part the underlying mechanisms are universal Given the availability of a new standardised measure for social deprivation in Europe the European Deprivation Index the networking of population based cancer registries across Europe as efficient surveillance tools the increasing comparability of the organisation of care in European countries and the recent launch of Europe s Beating Cancer Plan this extensive review of social inequalities in cancer on a European scale is both relevant and timely The book consists of 21 chapters organised in four sections Part I General Considerations and Methodologic Aspects Part II Social Disparities in Cancer Incidence and Survival Reports Part III Social Disparities in Cancer Incidence and Survival Mechanisms Part IV Towards an Evidence Based Policy for Tackling Social Inequalities in Cancer Social Environment and Cancer in Europe Towards an Evidence Based Public Health Policy is a unique resource that presents up to date methods for analysing quantitative data It focusses on inequalities in cancer incidence and survival within the wider framework of inequalities in health This book will be an essential reference for policy makers researchers public health professionals social scientists and oncologists

Statistical Methods for Dose-Finding Experiments Sylvie Chevret, 2006-05-26 Dose finding experiments define the safe dosage of a drug in development in terms of the quantity given to a patient Statistical methods play a crucial role in identifying optimal dosage Used appropriately these methods provide reliable results and reduce trial duration and costs In practice however dose finding is often done poorly with widely used conventional methods frequently being unreliable leading to inaccurate results However there have been many advances in recent years with new statistical techniques being developed and it is important that these new techniques are utilized correctly Statistical Methods for Dose Finding Experiments reviews the main statistical approaches for dose finding in phase I II clinical trials and presents practical guidance on their correct use Includes an introductory section summarizing the essential concepts in dose finding Contains a section on algorithm based approaches such as the traditional 3 3 design and a section on model based approaches such as the continual reassessment method Explains fundamental issues such as how to stop trials early and how to cope with delayed or ordinal outcomes Discusses in detail the main websites and software used to implement the methods Features numerous worked examples making use of real data Statistical Methods for Dose Finding Experiments is an important collaboration from the leading experts in the area Primarily aimed at statisticians and clinicians working in clinical trials and medical research there is also much to benefit graduate students of biostatistics **Latent Activation Cure Rate**

Competing Risks Melania Pintilie,2006-10-06 The book presents an introduction to the topic for statisticians who have not any exposure to competing risks and for non statisticians whose research involves time to event data The analysis of such data is usually referred to as survival analysis and also called as analysis of incomplete data and presents the software available to perform the analysis in R and includes macros for analysis in SAS

Selection Bias and Covariate Imbalances in Randomized Clinical Trials Vance Berger,2005-05-27 Baseline data in clinical trials consists of information regarding patients that is measured at the outset prior to randomization or treatment with study medications In studies where important baseline factors appear well balanced it can be reasonably concluded that any differences in outcome between the intervention and control groups are a real effect of treatment The common assumption that any baseline differences in a randomized study are necessarily random is however misplaced Selection bias can and does occur even in randomized clinical trials Steps need to be taken in order to ensure that this does not compromise the integrity of clinical trials hence Selection Bias and Covariate Imbalances in Randomized Clinical Trials offers the first comprehensive treatment of the subject and the methodology involved Provides an overview of the hierarchy of study designs and justifies the position of randomized trials at the top of this hierarchy Discusses the strengths and defects of randomization and provides real evidence to justify concern regarding its defects Outlays the damaging consequences that selection bias causes when it does occur Considers courses of action that can be taken to manage contain the problem Presents methods that can be used to detect selection bias in randomized trials and methods to correct for selection bias Concludes by providing a comprehensive plan for managing baseline imbalances and selection bias in randomized trials and proposing open problems for future research Selection Bias and Covariate Imbalances in Randomized Clinical Trials provides an in depth overview of a key aspect in the design and analysis of clinical trials featuring modern and novel approaches to the methodology described Illustrated with case studies this book introduces groundbreaking ideas and research that will be invaluable to researchers and practitioners who design and analyse clinical trials It will also be of interest to graduate students within the field of biostatistics
