Data Envelopment Analysis The Assessment Of Performance:

Data Envelopment Analysis Michael A. Norman,1991 *Quantitative Models for Performance Evaluation and Benchmarking* Joe Zhu,2014-09-11 The author is one of the prominent researchers in the field of Data Envelopment Analysis DEA a powerful data analysis tool that can be used in performance evaluation and benchmarking This book is based upon the author s years of research and teaching experiences It is difficult to evaluate an organization s performance when multiple performance metrics are present The difficulties are further enhanced when the relationships among the performance metrics are complex and involve unknown tradeoffs This book introduces Data Envelopment Analysis DEA as a multiple measure performance evaluation and benchmarking tool The focus of performance evaluation and benchmarking is shifted from characterizing performance in terms of single measures to evaluating performance as a multidimensional systems perspective Conventional and new DEA approaches are presented and discussed using Excel spreadsheets one of the most effective ways to analyze and evaluate decision alternatives The user can easily develop and customize new DEA models based upon these spreadsheets DEA models and approaches are presented to deal with performance evaluation problems in a variety of contexts For example a context dependent DEA measures the relative attractiveness of similar operations processes products Sensitivity analysis techniques can be easily applied and used to identify critical performance measures Two stage network efficiency models can be utilized to study performance of supply chain DEA benchmarking models extend DEA s ability in performance evaluation Various cross efficiency approaches are presented to provide peer evaluation scores This book also provides an easy to use DEA software DEA Frontier This DEA Frontier is an Add In for Microsoft Excel and provides a custom menu of DEA approaches This version of DEA Frontier is for use with Excel 97 2013 under Windows and can solve up to 50 DMUs subject to the capacity of Excel Solver It is an extremely powerful tool that can assist decision makers in benchmarking and analyzing complex operational performance issues in manufacturing organizations as well as evaluating processes in banking retail franchising health care public services and many other industries **Data**

Envelopment Analysis and Effective Performance Assessment Lotfi, Farhad Hossein Zadeh,Najafi, Seyed Esmaeil,Nozari, Hamed,2016-09-01 For any organization analysis of performance and effectiveness through available data allows for informed decision making Data envelopment analysis or DEA is a popular effective method that can be used to measure productive efficiency in operations management assessment Data Envelopment Analysis and Effective Performance Assessment addresses the myriad of practical uses and innovative developments of DEA Emphasizing the importance of analyzing productivity by measuring inputs goals economic growth and performance this book covers a wide breadth of innovative knowledge This book is essential reading for managers business professionals students of business and ICT and computer engineers **Data Envelopment Analysis: from Normative to Descriptive Performance Evaluation** Nadia Vazquez Novoa,2017 The question of modern performance evaluation has been extensively discussed in the literature leading

to a call for models including non optimizing behaviors of decision makers and non financial performance criteria A promising management instrument is data envelopment analysis DEA which enables the aggregation of financial and non financial indicators into a single measure This work contributes to a better understanding of DEA from two perspectives i it offers a normative solution to the zero value weight problem and ii it provides the first experimental results on behavioral DEA based on an original taxonomy of cognitive biases related to performance evaluation Behavioral DEA is a completely new research area which yields plenty of research opportunities

Health Care Benchmarking and Performance Evaluation Yasar A. Ozcan, 2014-07-01 This new edition continues to emphasize the use of data envelopment analysis DEA to create optimization based benchmarks within hospitals physician group practices health maintenance organizations nursing homes and other health care delivery organizations Suitable for graduate students learning DEA applications in health care as well as for practicing administrators it is divided into two sections covering methods and applications Section I considers efficiency evaluations using DEA returns to scale weight restricted multiplier models non oriented or slack based models including in this edition two versions of non controllable variable models and categorical variable models longitudinal panel evaluations and the effectiveness dimension of performance evaluation A new chapter then looks at new and advanced models of DEA including super efficiency congestion DEA network DEA and dynamic network models Mathematical formulations of various DEA models are placed in end of chapter appendices Section II then looks at health care applications within particular settings chapter by chapter including hospitals physician practices nursing homes and health maintenance organizations HMOs Other chapters then explore home health care and home health agencies dialysis centers community mental health centers community based your services organ procurement organizations aging agencies and dental providers DEA models to evaluate provider performance for specific treatments including stroke mechanical ventilation and perioperative services A new chapter then examines international country based applications of DEA in health care in 16 different countries along with OECD and multi country studies Most of the existing chapters in this section were expanded with recent applications Included with the book is online access to a learning version of DEA Solver software written by Professor Kaoru Tone which can solve up to 50 DMUs for various DEA models listed in the User's Guide at the end of the book

Health Care Benchmarking and Performance Evaluation Yasar A. Ozcan, 2008-01-02 Applies the analytical framework of Data Envelopment Analysis methodology to provide health care administrators with specific benchmarking tools for performance evaluation This book provides information of what is lacking in specific aspects of performance and then outlines the ways how these performance inadequacies can be improved

Environmental Assessment on Energy and Sustainability by Data Envelopment Analysis Toshiyuki Sueyoshi, Mika Goto, 2018-02-02 Introduces a bold new model for energy industry pollution prevention and sustainable growth Balancing industrial pollution prevention with economic growth is one of the knottiest problems faced by industry today This book introduces a novel approach to using data envelopment

analysis DEA as a powerful tool for achieving that balance in the energy industries the world's largest producers of greenhouse gases It describes a rigorous framework that integrates elements of the social sciences corporate strategy regional economics energy economics and environmental policy and delivers a methodology and a set of strategies for promoting green innovation while solving key managerial challenges to greenhouse gas reduction and business growth In writing this book the authors have drawn upon their pioneering work and considerable experience in the field to develop an unconventional holistic approach to using DEA to assess key aspects of sustainability development The book is divided into two sections the first of which lays out a conventional framework of DEA as the basis for new research directions In the second section the authors delve into conceptual and methodological extensions of conventional DEA for solving problems of environmental assessment in all contemporary energy industry sectors Introduces a powerful new approach to using DEA to achieve pollution prevention sustainability and business growth Covers the fundamentals of DEA including theory statistical models and practical issues of conventional applications of DEA Explores new statistical modeling strategies and explores their economic and business implications Examines applications of DEA to environmental analysis across the complete range of energy industries including coal petroleum shale gas nuclear energy renewables and more Summarizes important studies and nearly 800 peer reviewed articles on energy the environment and sustainability Environmental Assessment on Energy and Sustainability by Data Envelopment Analysis is must reading for researchers academics graduate students and practitioners in the energy industries as well as government officials and policymakers tasked with regulating the environmental impacts of industrial pollution

Two-Phase Network Data Envelopment Analysis: An Example of Bank Performance Assessment Youzheng Liu, 2018 Data envelopment analysis DEA models assess decision making units DMUs which directly convert multiple inputs into multiple outputs Network DEA models have been studied extensively However the performance indices that link the two stages are assumed to be fixed or non discretionary their values are not adjustable These models only assumed that the reductions on the inputs and additions on the outputs would improve the overall efficiency But in the real world the link is always adjustable Free links means that the intermediate items are adjustable or discretionary and each DMU can be increased or decreased from the observed one The current chapter introduces a two phase procedure with free links to assess system performance Phase I is a proposed slack based measurement SBM model to partition the links into two sets as input and as output Phase II is a modified SBM model to determine the slack of each input as input link output and as output link This proposed model counts the slacks associated with the intermediate items in the efficiency scores and determines the entire system performance by the directional distance function It is validated using network procedure and assesses the performance of supply chain management system

Performance Measurement with Fuzzy Data Envelopment Analysis Ali Emrouznejad, Madjid Tavana, 2013-11-29 The intensity of global competition and ever increasing economic uncertainties has led organizations to search for more efficient and effective ways to manage

their business operations Data envelopment analysis DEA has been widely used as a conceptually simple yet powerful tool for evaluating organizational productivity and performance Fuzzy DEA FDEA is a promising extension of the conventional DEA proposed for dealing with imprecise and ambiguous data in performance measurement problems This book is the first volume in the literature to present the state of the art developments and applications of FDEA It is designed for students educators researchers consultants and practicing managers in business industry and government with a basic understanding of the DEA and fuzzy logic concepts

Assessment of Manufacturing Performance Using Data Envelopment Analysis Angela BenBarka, 2007 In today's global and highly competitive economy organizations are constantly monitoring their performance and the performance of their competitors With technological advancements and increased expectations from consumers time becomes a critical factor in an organization's ability to sustain their advantage over competitors By understanding the multiple components which compose their performance and quickly identifying and addressing inefficiencies within the systems an organization can maintain and possibly increase their share of the marketplace This research will assess the feasibility of data envelopment analysis DEA as a tool for organizations to measure their performance over time DEA has been widely used and accepted as methodology for performance evaluations and benchmarking The basic concept of directing methodology at frontiers rather than central tendencies such as statistical regression gives DEA an advantage over previous traditional methods DEA is capable of identifying relationships among entities that traditional methods are not able to identify It quantifies relations of entities in a direct manner without requiring several assumptions or variations on data sets DEA will be applied to a manufacturing facility for assessment of the facility's monthly performance and distinction of good performing months from poor performing months The manufacturing facility is one of many manufacturing facilities of a large publicly owned corporation The facility has a large product mix with over 100 different formulations resulting in multiple inputs to multiple outputs Faced with the large product mix executives from the manufacturing facility are constantly challenged to meet productivity levels and maintain an edge on their competitors all the while fulfilling customer expectations meeting industry regulations and staying abreast technological advancements This research will provide a mechanism for manufacturing executives to easily and rapidly distinguish facility performance Concepts of DEA will be extended to consider modeling of DEA efficiency scores to evaluate performance over time and determine the overall efficiency or health of the facility The DEA model will then be utilized as input into classical statistical control charts to track performance over time Monthly production reports associated with the extreme values on the control charts will be evaluated by experts within the manufacturing facility for validation of the DEA model

Measurement and Improvement Soushi Suzuki, Peter Nijkamp, 2017-03-14 This is the first book to fully introduce a newly developed distance friction minimization DFM model which is one of the new efficiency improvement projection approaches in data envelopment analysis DEA. The DFM model can produce a most effective solution in efficiency improvement projections for inefficient spatial entities decision making units. The book provides a set of fresh contributions to a quantitative assessment of the performance of such policy entities. First it offers a state of the art overview of current DEA models and approaches followed by the operational design of various new types of DEA models each of them addressing weaknesses in traditional DEA approaches. Then it illustrates the assessment potential of DEA and its new variants in particular the DFM model and subsequent extensions on the basis of a broadly composed collection of empirical case studies centering mainly but not exclusively on Japan and other Asian nations. *Integrating Data Envelopment Analysis and Balanced Scorecard for Improving Organizations' Performance Assessment* Nouran Nabil A. M. Ellelly, 2019 Industrial Design and Mechanical Power Jing Guo, 2012-11-12 Selected peer reviewed papers from the 2012 International Conference on Industrial Design and Mechanical Power ICIDMP 2012 July 10-11 2012 Huangshan China **Performance Evaluation** Harald Dyckhoff, Rainer Souren, 2020-01-13 This book examines performance evaluation in the context of assessing the non financial outcomes of human activities. The topic is particularly relevant when economic environmental or social performance has to be evaluated e.g. the efficiency of actions and the lifecycles of products. The authors combine multi criteria decision making and production theories to develop a theoretical and methodological foundation for performance evaluation. They also demonstrate the typical pitfalls that are hindering the implementation of contemporary methods in practice. Special emphasis is placed on efficiency measurement with data envelopment analysis DEA and on data aggregation in life cycle assessment LCA. *Journal of the Royal Statistical Society*, 2002 *Handbook of Operations Analytics Using Data Envelopment Analysis* Shiuh-Nan Hwang, Hsuan-Shih Lee, Joe Zhu, 2016-07-01 This handbook focuses on Data Envelopment Analysis DEA applications in operations analytics which are fundamental tools and techniques for improving operation functions and attaining long term competitiveness. In fact the handbook demonstrates that DEA can be viewed as Data Envelopment Analytics. Chapters include a review of cross efficiency evaluation a case study on measuring the environmental performance of OECD countries how to select a set of performance metrics in DEA with an application to American banks a relational network model to take the operations of individual periods into account in measuring efficiencies how the efficient frontier methods DEA and stochastic frontier analysis SFA can be used synergistically and how to integrate DEA and multidimensional scaling. In other chapters authors construct a dynamic three stage network DEA model a bootstrapping based methodology to evaluate returns to scale and convexity assumptions in DEA hybridizing DEA and cooperative games using DEA to represent the production technology and directional distance functions to measure bank performance an input specific Luenberger energy and environmental productivity indicator and the issue of reference set by differentiating

between the uniquely found reference set and the unary and maximal types of the reference set Finally additional chapters evaluate and compare the technological advancement observed in different hybrid electric vehicles HEV market segments over the past 15 years radial measurement of efficiency for the production process possessing multi components under different production technologies issues around the use of accounting information in DEA how to use DEA environmental assessment to establish corporate sustainability a summary of research efforts on DEA environmental assessment applied to energy in the last 30 years and an overview of DEA and how it can be utilized alone and with other techniques to investigate corporate environmental sustainability questions
