Data Mining For Scientific And Engineering Applications:

Data Mining for Scientific and Engineering Applications R.L. Grossman,C. Kamath,P. Kegelmeyer,V. Kumar,R. Namburu,2001-10-31 Advances in technology are making massive data sets common in many scientific disciplines such as astronomy medical imaging bio informatics combinatorial chemistry remote sensing and physics To find useful information in these data sets scientists and engineers are turning to data mining techniques This book is a collection of papers based on the first two in a series of workshops on mining scientific datasets It illustrates the diversity of problems and application areas that can benefit from data mining as well as the issues and challenges that differentiate scientific data mining from its commercial counterpart While the focus of the book is on mining scientific data the work is of broader interest as many of the techniques can be applied equally well to data arising in business and web applications Audience This work would be an excellent text for students and researchers who are familiar with the basic principles of data mining and want to learn more about the application of data mining to their problem in science or engineering   Introduction to Data Mining and Its Applications S. Sumathi,S.N. Sivanandam,2006-09-26 This book explores the concepts of data mining and data warehousing a promising and flourishing frontier in data base systems and new data base applications and is also designed to give a broad yet in depth overview of the field of data mining Data mining is a multidisciplinary field drawing work from areas including database technology AI machine learning NN statistics pattern recognition knowledge based systems knowledge acquisition information retrieval high performance computing and data visualization This book is intended for a wide audience of readers who are not necessarily experts in data warehousing and data mining but are interested in receiving a general introduction to these areas and their many practical applications Since data mining technology has become a hot topic not only among academic students but also for decision makers it provides valuable hidden business and scientific intelligence from a large amount of historical data It is also written for technical managers and executives as well as for technologists interested in learning about data mining   Scientific Data Mining Chandrika Kamath,2009-06-04 Chandrika Kamath describes how techniques from the multi disciplinary field of data mining can be used to address the modern problem of data overload in science and engineering domains Starting with a survey of analysis problems in different applications it identifies the common themes across these domains   **African Mathematics** Abdul Karim Bangura,2012 This is the first comprehensive text on African Mathematics that can be used to address some of the problematic issues in this area These issues include attitudes curriculum development educational change academic achievement standardized and other tests performance factors student characteristics cross cultural differences and studies literacy native speakers social class and differences equal education teaching methods knowledge level educational guidelines and policies transitional schools comparative education other subjects such as physics and social studies surveys talent educational research teacher education and qualifications academic standards teacher effectiveness lesson plans and modules teacher characteristics instructional

Document Supply Centre,2002 **Proceedings** ,2001 Commercial applications of data mining in areas such as e commerce market basket analysis text mining and web mining have taken on a central focus in the JCDD community However there is a significant amount of innovative data mining work taking place in the context of scientific and engineering applications that is not well represented in the mainstream KDD conferences For example scientific data mining techniques are being developed and applied to diverse fields such as remote sensing physics chemistry biology astronomy structural mechanics computational fluid dynamics etc In these areas data mining frequently complements and enhances existing analysis methods based on statistics exploratory data analysis and domain specific approaches On the surface it may appear that data from one scientific field say genomics is very different from another field such as physics However despite their diversity there is much that is common across the mining of scientific and engineering data For example techniques used to identify objects in images are very similar regardless of whether the images came from a remote sensing application a physics experiment an astronomy observation or a medical study Further with data mining being applied to new types of data such as mesh data from scientific simulations there is the opportunity to apply and extend data mining to new scientific domains This one day workshop brings together data miners analyzing science data and scientists from diverse fields to share their experiences learn how techniques developed in one field can be applied in another and better understand some of the newer techniques being developed in the KDD community This is the fourth workshop on the topic of Mining Scientific Data sets for information on earlier workshops see http www ahpcrc org conferences This workshop continues the tradition
