Formal Methods in Databases and Software Engineering V.S. Alagar, Laks V.S. Lakshmanan, F. Sadri, 2012-12-06 Logic and object orientation have come to be recognized as being among the most powerful paradigms for modeling information systems The term information systems is used here in a very general context to denote database systems software development systems knowledge base systems proof support systems distributed systems and reactive systems One of the most vigorously researched topics common to all information systems is formal modeling An elegant high level abstraction applicable to both application domain and system domain concepts will always lead to a system design from outside in that is the aggregation of ideas is around real life objects about which the system is to be designed Formal methods when applied with this view in mind especially during early stages of system development can lead to a formal reasoning on the intended properties thus revealing system flaws that might otherwise be discovered much later Logic in different styles and semantics is being used to model databases and their transactions it is also used to specify concurrent distributed real time and reactive systems The notion of object is central to the modeling of object oriented databases as well as object oriented design and programs in software engineering Both database and software engineering communities have undoubtedly made important contributions to formalisms based on logic and objects It is worthwhile bringing together the

ideas developed by the two communities in isolation and focusing on integrating their common strengths Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing 2010 Roger Lee, 2010-10-01 th The purpose of the 11 Conference on Software Engineering Artificial Intelligence Networking and Parallel Distributed Computing SNPD 2010 held on June 9 11 2010 in London United Kingdom was to bring together researchers and scientists businessmen and entrepreneurs teachers and students to discuss the numerous fields of computer science and to share ideas and information in a meaningful way Our conference officers selected the best 15 papers from those papers accepted for presentation at the conference in order to publish them in this volume The papers were chosen based on review scores submitted by members of the program committee and underwent further rounds of rigorous review In Chapter 1 Cai Luyuan et al Present a new method of shape decomposition based on a refined morphological shape decomposition process In Chapter 2 Kazunori Iwata et al propose a method for reducing the margin of error in effort and error prediction models for embedded software development projects using artificial neural networks ANNs In Chapter 3 Viliam imko et al describe a model driven tool that allows system code to be generated from use cases in plain English In Chapter 4 Abir Smiti and Zied Elouedi propose a Case Base Maintenance CBM method that uses machine learning techniques to preserve the maximum competence of a system In Chapter 5 Shagufta Henna and Thomas Erlebach provide a simulation based analysis of some widely used broadcasting schemes within mobile ad hoc networks MANETs and propose adaptive extensions to an existing broadcasting algorithm Principles of Software Engineering EduGorilla Prep Experts, 2024-06-05 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels Data Structure and Software Engineering James L.
