Dating Methods In Archaeology:

Dating Methods in Archaeology Joseph W. Michels, 1973 *Dating Techniques for the Archaeologist* Henry N. Michael, Elizabeth K. Ralph, 1971 Modern dating methods have revolutionized the placing in time of prehistoric events and many earlier estimates have been completely revised the end of the Ice Age has been brought forward in time the beginning of urbanization has been pushed back Yet there are still uncertainties and controversies and a large number of archaeologists are not sufficiently well acquainted with the latest techniques This book attempts to remedy the situation by discussing the technicalities of the tools presently available for accurate dating The book opens with a detailed presentation of C14 dating which includes a summary of its development and explanation of the method information on collecting packaging labeling and description of samples pretreatments laboratory methods and interpretation of C14 dates Archaeological applications of tree ring data as well as the methods involved in archaeomagnetic dating which is rapidly becoming one of the significant methods of dating fire ceramic objects and the thermoluminescent dating of pottery are then considered Subsequent chapters treat the basic principles sample gathering methods and measurement techniques of fission track dating potassium argon dating it was K Ar measurements on volcanic rock that first determined the exact age of certain hominoid remains discovered by L S B Leakey in the Olduvai Gorge and obsidian hydration dating which has aroused great interest and enthusiasm due to its wide range of application in archaeological analysis and its low cost While all of these techniques are still in the process of development and refinement enough is known to make it imperative for archaeologists in the field and in the laboratory to be aware of them This is essentially a fieldbook for diggers it will give the archaeologist enough information so that he collects and prepares his samples properly and provides ample references so that he may further pursue each dating method **Chronometric Dating in Archaeology** R.E. Taylor, Martin J. Aitken, 2013-06-29 Since World War II there has been tremendous success in the development of new methods for dating artifacts the so called radiocarbon revolution was only the first such discovery The increasing accuracy of the various new techniques has brought about major changes in archaeological research strategies This important new text compiles the work of some of today's most innovative archaeologists who summarize progress in their respective techniques over the last 30 years with an emphasis on developments of the last five and the status of current research Seriation, Stratigraphy, and Index Fossils Michael J. O'Brien, R. Lee Lyman, 2013-03-24 It is difficult for today's students of archaeology to imagine an era when chronometric dating methods were unavailable However even a casual perusal of the large body of literature that arose during the first half of the twentieth century reveals a battery of clever methods used to determine the relative ages of archaeological phenomena often with considerable precision Stratigraphic excavation is perhaps the best known of the various relative dating methods used by prehistorians Although there are several techniques of using artifacts from superposed strata to measure time these are rarely if ever differentiated Rather common practice is to categorize them under the heading

stratigraphic excavation This text distinguishes among the several techniques and argues that stratigraphic excavation tends to result in discontinuous measures of time a point little appreciated by modern archaeologists Although not as well known as stratigraphic excavation two other methods of relative dating have figured important in Americanist archaeology seriation and the use of index fossils The latter like stratigraphic excavation measures time discontinuously while the former in various guises measures time continuously Perhaps no other method used in archaeology is as misunderstood as seriation and the authors provide detailed descriptions and examples of each of its three different techniques Each method and technique of relative dating is placed in historical perspective with particular focus on developments in North America an approach that allows a more complete understanding of the methods described both in terms of analytical technique and disciplinary history This text will appeal to all archaeologists from graduate students to seasoned professionals who want to learn more about the backbone of archaeological dating

The Birth of Prehistoric Chronology Bo Gräslund,1987-10-22 Professor Gr slund s book is the first in depth study of systematic methods for dating archaeological materials

Scientific Dating in Archaeology Seren Griffiths,2022-10-21 A variety of techniques have been developed to provide scientific chronologies of archaeological sites and material culture These chronologies under pin the narratives that are generated for prehistoric and other periods The application of Bayesian statistical analysis to scientific chronologies has been hailed as a revolution in understanding and has brought renewed emphasis onto how we generate scientific chronological data how these data are applied into wider narratives and the epistemological importance of these data This volume will provide a timely review of the methods applications and challenges of applying different scientific dating techniques to archaeological sites and material culture It will then provide an introduction to Bayesian modelling and highlight a series of considerations in the application of scientific dating techniques

Field Methods in Archaeology Thomas R. Hester,Robert Fleming Heizer,John Allen Graham,1975 This highly regarded comprehensive guide provides an up to date overview of the variety of methods used in field archaeology from research design to excavation strategies to conservation of artifacts and record keeping The contributors to the volume bring a wealth of expertise on diverse subjects and offer practical advice on their areas of special interest
