## **Data Mining And Knowledge Discovery With Evolutionary Algorithms:**

**Data Mining and Knowledge Discovery with Evolutionary Algorithms** Alex A. Freitas, 2013-11-11 This book addresses the integration of two areas of computer science namely data mining and evolutionary algorithms Both these areas have become increasingly popular in the last few years and their integration is currently an area of active research In essence data mining consists of extracting valid comprehensible and interesting knowledge from data Data mining is actually an interdisciplinary field since there are many kinds of methods that can be used to extract knowledge from data Arguably data mining mainly uses methods from machine learning a branch of artificial intelligence and statistics including statistical pattern recognition Our discussion of data mining and evolutionary algorithms is primarily based on machine learning concepts and principles In particular in this book we emphasize the importance of discovering comprehensible interesting knowledge which the user can potentially use to make intelligent decisions In a nutshell the motivation for applying evolutionary algorithms to data mining is that evolutionary algorithms are robust search methods which perform a global search in the space of candidate solutions rules or another form of knowledge representation In contrast most rule induction methods perform a local greedy search in the space of candidate rules Intuitively the global search of evolutionary algorithms can discover interesting rules and patterns that would be missed by the greedy search

**Data Mining And Knowledge Discovery With Evolutionary Algorithms** Freitas Alex A., 2007-10-01 *Multi-Objective Evolutionary Algorithms for Knowledge Discovery from Databases* Ashish Ghosh, Satchidananda Dehuri, Susmita Ghosh, 2008-02-28 The present volume provides a collection of seven articles containing new and high quality research results demonstrating the significance of Multi objective Evolutionary Algorithms MOEA for data mining tasks in Knowledge Discovery from Databases KDD These articles are written by leading experts around the world It is shown how the different MOEAs can be utilized both in individual and integrated manner in various ways to efficiently mine data from large databases

**Evolutionary Computation in Data Mining** Ashish Ghosh, 2006-06-22 Data mining DM consists of extracting interesting knowledge from the world large and is the core step of a broader process called the knowledge discovery from databases KDD process In addition to the DM step which actually extracts knowledge from data the KDD process includes several preprocessing or data preparation and post processing or knowledge refinement steps The goal of data preprocessing methods is to transform the data to facilitate the application of a or several given DM algorithms whereas the goal of knowledge refinement methods is to validate and refine discovered knowledge Ideally discovered knowledge should be not only accurate but also comprehensible and interesting to the user The total process is highly computation intensive The idea of automatically discovering knowledge from databases is a very attractive and challenging task both for academia and for industry Hence there has been a growing interest in data mining in several AI related areas including evolutionary algorithms EAs The main motivation for applying EAs to KDD tasks is that they are robust and adaptive search methods which perform a global search

in the space of candidate solutions for instance rules or another form of knowledge representation

**Soft Computing for Knowledge Discovery and Data Mining** Oded Maimon, Lior Rokach, 2007-10-25 Data mining is the science and technology of exploring large and complex bodies of data in order to discover useful patterns It is extremely important because it enables modeling and knowledge extraction from abundant data availability Soft Computing for Knowledge Discovery and Data Mining introduces soft computing methods extending the envelope of problems that data mining can solve efficiently It presents practical soft computing approaches in data mining This edited volume by highly regarded authors includes several contributors of the 2005 Data Mining and Knowledge Discovery Handbook This book was written to provide investigators in the fields of information systems engineering computer science statistics and management with a profound source for the role of soft computing in data mining Not only does this book feature illustrations of various applications including manufacturing medical banking insurance and others but also includes various real world case studies with detailed results Soft Computing for Knowledge Discovery and Data Mining is designed for practitioners and researchers in industry Practitioners and researchers may be particularly interested in the description of real world data mining projects performed with soft computing This book is also suitable as a secondary textbook or reference for advanced level students in information systems engineering computer science and statistics management

**Advances in Evolutionary Computing** Ashish Ghosh, Shigeyoshi Tsutsui, 2012-12-06 The term evolutionary computing refers to the study of the foundations and applications of certain heuristic techniques based on the principles of natural evolution thus the aim of designing evolutionary algorithms EAs is to mimic some of the processes taking place in natural evolution These algorithms are classified into three main categories depending more on historical development than on major functional techniques In fact their biological basis is essentially the same Hence EC GA uGP uES uEP EC Evolutionary Computing GA Genetic Algorithms GP Genetic Programming ES Evolution Strategies EP Evolutionary Programming Although the details of biological evolution are not completely understood even nowadays there is some strong experimental evidence to support the following points Evolution is a process operating on chromosomes rather than on organisms Natural selection is the mechanism that selects organisms which are well adapted to the environment to reproduce more often than those which are not The evolutionary process takes place during the reproduction stage that includes mutation which causes the chromosomes of offspring to be different from those of the parents and recombination which combines the chromosomes of the parents to produce the offspring Based upon these features the previously mentioned three models of evolutionary computing were independently and almost simultaneously developed An evolutionary algorithm EA is an iterative and stochastic process that operates on a

set of individuals called a population      **Automating the Design of Data Mining Algorithms** Gisele L. Pappa,Alex Freitas,2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future

Medical Data Mining and Knowledge Discovery Krzysztof J. Cios, 2001-01-12 Modern medicine generates almost daily huge amounts of heterogeneous data For example medical data may contain SPECT images signals like ECG clinical information like temperature cholesterol levels etc as well as the physician's interpretation Those who deal with such data understand that there is a widening gap between data collection and data comprehension Computerized techniques are needed to help humans address this problem This volume is devoted to the relatively young and growing field of medical data mining and knowledge discovery As more and more medical procedures employ imaging as a preferred diagnostic tool there is a need to develop methods for efficient mining in databases of images Other significant features are security and confidentiality concerns Moreover the physician's interpretation of images signals or other technical data is written in unstructured English which is very difficult to mine This book addresses all these specific features *Advanced Methods for Knowledge Discovery from Complex Data* Ujjwal Maulik, Lawrence B. Holder, Diane J. Cook, 2006-05-06 The growth in the amount of data collected and generated has exploded in recent times with the widespread automation of various day to day activities advances in high level scientific and engineering research and the development of efficient data collection tools This has given rise to the need for automatically analyzing the data in order to extract knowledge from it thereby making the data potentially more useful Knowledge discovery and data mining KDD is the process of identifying valid novel potentially useful and ultimately understandable patterns from massive data repositories It is a multi disciplinary topic drawing from several fields including expert systems machine learning intelligent databases knowledge acquisition case based reasoning pattern recognition and statistics Many data mining systems have typically evolved around well organized database systems e.g relational databases containing relevant information But more and more one finds relevant information hidden in unstructured text and in other complex forms Mining in the domains of the world wide web bioinformatics geoscientific data and spatial and temporal applications comprise some illustrative examples in this regard Discovery of knowledge or potentially useful patterns from such complex data often requires the application of advanced techniques that are better able to exploit the nature and representation of the data Such advanced methods include among others graph based and tree based approaches to relational learning sequence mining link based classification Bayesian networks hidden Markov models neural networks kernel based methods evolutionary algorithms rough sets and fuzzy logic and hybrid systems Many of these methods are developed in the following chapters *Data Mining for a Web-based Educational System* Behrooz Minaei-Bidgoli, 2004

**Knowledge-Based Intelligent Information and Engineering Systems** Bogdan Gabrys, 2006-10-11 The three volume set LNAI 4251 LNAI 4252 and LNAI 4253 constitutes the refereed proceedings of the 10th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2006 held in Bournemouth UK in October 2006 The 480 revised papers presented were carefully reviewed and selected from about 1400 submissions The papers present a wealth of original research results from the field of intelligent information processing Data Mining V.
