challenging and practical problems to be solved This Special Issue belongs to the section Mathematics and Computer Science Its aim is to establish a brief collection of carefully selected papers presenting new and original methods data analyses case studies comparative studies and other research on the topic of statistical data modeling and ML as well as their applications Particular attention is given but is not limited to theories and applications in diverse areas such as computer science medicine engineering banking education sociology economics among others The resulting palette of methods algorithms and applications for statistical modeling and ML presented in this Special Issue is expected to contribute to the further development of research in this area We also believe that the new knowledge acquired here as well as the applied results are attractive and useful for young scientists doctoral students and researchers from various scientific specialties *Statistical Analysis of Epidemiologic Data* Steve Selvin,2004-05-13 Analytic procedures suitable for the study of human disease are scattered throughout the statistical and epidemiologic literature Explanations of their properties are frequently presented in mathematical and theoretical language This well established text gives readers a clear understanding of the statistical methods that are widely used in epidemiologic research without depending on advanced mathematical or statistical theory By applying these methods to actual data Selvin reveals the strengths and weaknesses of each analytic approach He combines techniques from the fields of statistics biostatistics demography and epidemiology to present a comprehensive overview that does not require computational details of the statistical techniques described For the Third Edition Selvin took out some old material e g the section on rarely used cross over designs and added new material e g sections on frequently used contingency table analysis Throughout the text he enriched existing discussions with new elements including the analysis of multi level categorical data and simple intuitive arguments that exponential survival times cause the hazard function to be constant He added a dozen new applied examples to illustrate such topics as the pitfalls of proportional mortality data the analysis of matched pair categorical data and the age adjustment of mortality rates based on statistical models The most important new feature is a chapter on Poisson regression analysis This essential statistical tool permits the multivariable analysis of rates probabilities and counts Statistical Foundations of Data Science Jianqing Fan,Runze Li,Cun-Hui Zhang,Hui Zou,2020-09-21 Statistical Foundations of Data Science gives a thorough introduction to commonly used statistical models contemporary statistical machine learning techniques and algorithms along with their mathematical insights and statistical theories It aims to serve as a graduate level textbook and a research monograph on high dimensional statistics sparsity and covariance learning machine learning and statistical inference It includes ample exercises that involve both theoretical studies as well as empirical applications The book begins with an introduction to the stylized features of big data and their impacts on statistical analysis It then introduces multiple linear regression and expands the techniques of model building via nonparametric regression and kernel tricks It provides a comprehensive account on sparsity explorations and model selections for multiple regression generalized linear models quantile regression robust regression hazards

regression among others High dimensional inference is also thoroughly addressed and so is feature screening The book also provides a comprehensive account on high dimensional covariance estimation learning latent factors and hidden structures as well as their applications to statistical estimation inference prediction and machine learning problems It also introduces thoroughly statistical machine learning theory and methods for classification clustering and prediction These include CART random forests boosting support vector machines clustering algorithms sparse PCA and deep learning   Statistical Models for Data Analysis Paolo Giudici,Salvatore Ingrassia,Maurizio Vichi,2013-07-11 The papers in this book cover issues related to the development of novel statistical models for the analysis of data They offer solutions for relevant problems in statistical data analysis and contain the explicit derivation of the proposed models as well as their implementation The book assembles the selected and refereed proceedings of the biannual conference of the Italian Classification and Data Analysis Group CLADAG a section of the Italian Statistical Society   *Publications of the National Bureau of Standards ... Catalog* United States. National Bureau of Standards,1983   Statistical Analysis of Network Data Eric D. Kolaczyk,2009-04-20 In recent years there has been an explosion of network data that is measu ments that are either of or from a system conceptualized as a network from se ingly all corners of science The combination of an increasingly pervasive interest in scienti c analysis at a systems level and the ever growing capabilities for hi throughput data collection in various elds has fueled this trend Researchers from biology and bioinformatics to physics from computer science to the information sciences and from economics to sociology are more and more engaged in the c lection and statistical analysis of data from a network centric perspective Accordingly the contributions to statistical methods and modeling in this area have come from a similarly broad spectrum of areas often independently of each other Many books already have been written addressing network data and network problems in speci c individual disciplines However there is at present no single book that provides a modern treatment of a core body of knowledge for statistical analysis of network data that cuts across the various disciplines and is organized rather according to a statistical taxonomy of tasks and techniques This book seeks to ll that gap and as such it aims to contribute to a growing trend in recent years to facilitate the exchange of knowledge across the pre existing boundaries between those disciplines that play a role in what is coming to be called network science   *Statistics for Data Science* James D. National Bureau of Standards,1983   The Statistical Analysis of Categorical Data Erling B. Andersen,2012-12-06 The aim of this book is to give an up to date account of the most commonly uses statisti cal models for categorical data The emphasis is on the connection between theory and applications to real data sets The book only covers models for categorical data Various models for mixed continuous and categorical data are thus excluded The book is written as a textbook although many methods and results are quite recent This should imply that the book can be used for a graduate course in categorical data analysis With this aim in mind chapters 3 to 12 are concluded with a set of exer cises In many cases the data sets are those data sets which were not included in the examples of the book although they at one point in time were regarded as potential can didates for an example A certain amount of general knowledge of statistical theory is necessary to fully benefit from the book A summary of the basic statistical concepts deemed necessary pre requisites is given in chapter 2 The mathematical level is only moderately high but the account iu chapter 3 of
