**Data Mining: A Heuristic Approach** Abbass, Hussein A., Sarker, Ruhul, Newton, Charles S., 2001-07-01 Real life problems are known to be messy dynamic and multi objective and involve high levels of uncertainty and constraints Because traditional problem solving methods are no longer capable of handling this level of complexity heuristic search methods have attracted increasing attention in recent years for solving such problems Inspired by nature biology statistical mechanics physics and neuroscience heuristics techniques are used to solve many problems where traditional methods have failed Data Mining A Heuristic Approach will be a repository for the applications of these techniques in the area of data mining

Nijssen,Barry O'Sullivan,Dino Pedreschi,2016-12-01 A successful integration of constraint programming and data mining has the potential to lead to a new ICT paradigm with far reaching implications It could change the face of data mining and machine learning as well as constraint programming technology It would not only allow one to use data mining techniques in constraint programming to identify and update constraints and optimization criteria but also to employ constraints and criteria in data mining and machine learning in order to discover models compatible with prior knowledge This book reports on some key results obtained on this integrated and cross disciplinary approach within the European FP7 FET Open project no 284715 on Inductive Constraint Programming and a number of associated workshops and Dagstuhl seminars The book is structured in five parts background learning to model learning to solve constraint programming for data mining and showcases Library & Information Science Abstracts ,2008 Stream Data Mining: Algorithms and Their Probabilistic Properties

Leszek Rutkowski,Maciej Jaworski,Piotr Duda,2019-05-17 This book presents a unique approach to stream data mining Unlike the vast majority of previous approaches which are largely based on heuristics it highlights methods and algorithms that are mathematically justified First it describes how to adapt static decision trees to accommodate data streams in this regard new splitting criteria are developed to guarantee that they are asymptotically equivalent to the classical batch tree Moreover new decision trees are designed leading to the original concept of hybrid trees In turn nonparametric techniques based on Parzen kernels and orthogonal series are employed to address concept drift in the problem of non stationary regressions and classification in a time varying environment Lastly an extremely challenging problem that involves designing ensembles and automatically choosing their sizes is described and solved Given its scope the book is intended for a professional audience of researchers and practitioners who deal with stream data e g in telecommunication banking and sensor networks **Automatic Documentation and Mathematical Linguistics** ,2002
