Managing Data Quality Gordon J. Brackstone, 2001 Under a definition of data quality that is based on fitness for use the management of accuracy in a statistical agency becomes a necessary but not sufficient condition for the production of data of acceptable quality Accurate data may not be useful if they are late inaccessible uninterpretable incoherent or on the wrong topic The degree of effort and attention devoted to managing accuracy must be balanced against the importance of managing all the other dimensions of data quality that are equally necessary for data to be useful With that proviso the paper examines the essential elements of managing accuracy in a statistical agency Upper limits of achievable accuracy are to a large extent set when broad resource levels are initially allocated to programs or subsequently revised The process by which such resource allocations are made is therefore a crucial component of the management of accuracy Within the budgetary limits set for individual statistical programs the management of accuracy may be considered under the three broad headings of program design implementation and accuracy assessment The paper describes approaches for managing accuracy in each of these three key activities The rapid technological change that agencies are currently experiencing has ramifications for accuracy management which are also emphasized where they arise
