Database Theory - ICDT '95 Georg Gottlob,1995-01-03 This volume presents the proceedings of the 1995 International Conference on Database Theory ICDT 95 held in Prague in January 1995 Besides two full invited papers and the abstracts of two tutorials the book includes the revised full versions of 29 technical contributions selected from a total of 116 submissions The papers address all current aspects of database theory they are organized in sections on optimization nonmonotonic semantics query languages concurrency control advanced models probabilistic methods constraints and dependencies and Datalog analysis Database Theory - Icdt '95 Georg Gottlob,Moshe Y. Georg Gottlob,Moshe Y. Vardi,1995 Logic in Databases Dino Pedreschi,Carlo Zaniolo,1996-10-02 This book constitutes the strictly refereed post workshop proceedings of the International Workshop on Logic in Databases LID 96 held in San Miniato Italy in July 1996 as the final meeting of an EC US cooperative activity The volume presents 21 revised full papers selected from 49 submissions as well as 3 invited contributions and a summary of a panel discussion on deductive databases challenges opportunities and future directions The retrospective survey on logic and databases by Jack Minker deserves a special mention it is a 56 page overview and lists 357 references The papers are organized in sections on uncertainty temporal and spatial reasoning updates active databases semantics advanced applications query evaluation language extensions and logic constructs and expressive power **Entity-Relationship Modeling** Bernhard Thalheim,2013-03-09

Database technology and entity relationship ER modeling have meanwhile reached the level of an established technology This book presents the achievements of research in this field in a comprehensive survey It deals with the entity relationship model and its extensions with regard to an integrated development and modeling of database applications and consequently the specification of structures behavior and interaction Apart from research on the ER model and the syntax semantics and pragmatics of database modeling the book also presents techniques for the translation of the ER model into classical database models and languages such as relational hierarchical and network models and languages and also into object oriented models The book is of interest for all database theoreticians as well as practitioners who are provided with the relevant foundations of database modeling Handbook on Data Management in Information Systems Jacek

Blazewicz,Wieslaw Kubiak,Tadeusz Morzy,Marek Rusinkiewicz,2012-12-06 This book is the sixth of a running series of volumes dedicated to selected topics of information theory and practice The objective of the series is to provide a reference source for problem solvers in business industry government and professional researchers and graduate students The first volume Handbook on Architecture of Information Systems presents a balanced number of contributions from academia and practitioners The structure of the material follows a differentiation between modeling languages tools and methodologies The second volume Handbook on Electronic Commerce examines electronic commerce storefront online business consumer interface business to business networking digital payment legal issues information product development and electronic

business models The third volume Handbook on Parallel and Distributed Processing presents basic concepts methods and recent developments in the field of parallel and distributed processing as well as some important applications of parallel and distributed computing In particular the book examines such fundamental issues in the above area as languages for parallel processing parallel operating systems architecture of parallel and distributed systems parallel database and multimedia systems networking aspects of parallel and distributed systems efficiency of parallel algorithms The fourth volume on Information Technologies for Education and Training is devoted to a presentation of current and future research and applications in the field of educational technology The fifth double volume on Knowledge Management contains an extensive fundamental coverage of the knowledge management field Semantics in Databases Bernhard Thalheim, Leonid Libkin, 1998-02-25 This book presents a coherent survey on exciting developments in database semantics The origins of the volume date back to a workshop held in Prague Czech Republic in 1995 The nine revised full papers and surveys presented were carefully reviewed for inclusion in the book They address more traditional aspects like dealing with integrity constraints and conceptual modeling as well as new areas of databases object orientation incomplete information database transformations and other issues are investigated by applying formal semantics e.g. the evolving algebra semantics

Constraint Databases Gabriel Kuper, Leonid Libkin, Jan Paredaens, 2013-03-09 This book is the first comprehensive survey of the field of constraint databases Constraint databases are a fairly new and active area of database research The key idea is that constraints such as linear or polynomial equations are used to represent large or even infinite sets in a compact way The ability to deal with infinite sets makes constraint databases particularly promising as a technology for integrating spatial and temporal data with standard relational databases Constraint databases bring techniques from a variety of fields such as logic and model theory algebraic and computational geometry as well as symbolic computation to the design and analysis of data models and query languages The book is a collaborative effort involving many authors who have contributed chapters on their fields of expertise Despite this the book is designed to be read as a whole as opposed to a collection of individual surveys In particular the terminology and the style of presentation have been standardized and there are multiple cross references between the chapters The idea of constraint databases goes back to the late Paris Kanellakis **Database Programming Languages** Sophie Cluet, Rick Hull, 1998-07-29 This book constitutes the thoroughly refereed post workshop proceedings of the 6th International Workshop on Database Programming Languages DBPL 6 held in Estes Park Colorado USA in August 1997 The 20 revised full papers presented have gone through two rounds of reviewing and selection Also included are two invited talks the transcription of a panel discussion and an introductory survey by the volume editors The papers address all current aspects of database programming languages in particular spatial databases typing query languages for new applications views expressive power aggregate queries cooperative work and transactions

Recent Advances in Temporal Databases James Clifford, Alexander

Tuzhilin,2012-12-06 The International Workshop on Temporal Databases held in Zurich Switzerland 17 18 September 1995 brought together researchers from academic and industrial institutions with database practitioners interested in keeping up with the state of the art developments in the management of temporal data A previous workshop in Arlington Texas in June 1993 focused on the development of an infrastructure that would spur the development of commercial implementations of many of the generally agreed upon features of temporal database management that have emerged from the temporal database research community over more than a decade of research This ARP AINSF sponsored Arlington workshop saw the formation of the TSQL2 Language Design Committee which led to the development of the recently completed TSQL2 Language Specification and also created a consensus glossary of temporal database terminology and a test suite of temporal database queries The Zurich workshop was conceived from the outset to be universal in scope and international in participation The Call for Papers sought to evoke the highest quality and most up to date temporal database research from around the world Mindful of the important work accomplished by the previous workshop the Call also specifically sought out research papers and panels that would comment and build upon the widely publicized results from Arlington These proceedings contain the papers that were selected for presentation at the International Workshop on Temporal Databases held in Zurich Switzerland on 17 18 September 1995 **Database Theory - ICDT '92** Joachim Biskup,Richard Hull,1992-10-05 The papers in this volume were presented at the International Conference on Database Theory held in Berlin Germany October 14 16 1992 This conference initiated the merger of two series of conferences on theoretical aspects of databases that were formed in parallel by different scientific communities in Europe The first series was known as the International Conference on Database Theory and the second as the Symposium on Mathematical Fundamentals of Database Systems In the future ICDT will be organized every two years alternating with the more practically oriented series of conferences on Extending Database Technology EDBT The volume contains 3 invited lectures and 26 contributed papers selected from a total of 107 submissions The papers are organized into sections on constraints and decomposition query languages updates and active databases concurrency control and recovery knowledge bases datalog complexity and optimization object orientation information capacity and security and data structures and algorithms Two of the invited papers survey research into theoretical database issues done in Eastern Europe during the past decade **Proceedings of the Fourteenth ACM SIGACT-SIGMOD-SIGART Symposium on Principles of Database Systems, PODS 1995, San Jose, California, May 22-25, 1995** ,1995 From the Logical Point of View ,1993 Proceedings of the Twentieth ACM SIGMOD-SIGACT-SIGART Symposium on Principles of Database Systems ,2001 **Algorithms and Data Structures** ,1995 **Proceedings of the Eighteenth ACM SIGMOD-SIGACT-SIGART Symposium on Principles of Database Systems** ,1999 Proceedings of the Twenty-third ACM SIGMOD-SIGACT-SIGART Symposium on Principles of Database Systems Association for Computing Machinery. Data Management Subhash Bhalla, 1995-10-25 This book constitutes the refereed proceedings of the 6th International Conference on Information Systems and Management of Data CISMOD 95 held in Bombay India in November 1995 The book presents 14 revised full papers selected from some 60 submissions together with six invited papers by leading experts These papers address the central issues of research and advanced application in the area of data management and information systems engineering they are organized in sections on query processing distributed systems performance evaluation knowledge discovery real time database systems product and process design and conceptual modelling

High-Performance Parallel Database Processing and Grid Databases David Tanar, Clement H. C. Leung, Wenny Rahayu, 2008-10-13 The latest techniques and principles of parallel and grid database processing The growth in grid databases coupled with the utility of parallel query processing presents an important opportunity to understand and utilize high performance parallel database processing within a major database management system DBMS This important new book provides readers with a fundamental understanding of parallelism in data intensive applications and demonstrates how to develop faster capabilities to support them It presents a balanced treatment of the theoretical and practical aspects of high performance databases to demonstrate how parallel query is executed in a DBMS including concepts algorithms analytical models and grid transactions High Performance Parallel Database Processing and Grid Databases serves as a valuable resource for researchers working in parallel databases and for practitioners interested in building a high performance database It is also a much needed self contained textbook for database courses at the advanced undergraduate and graduate levels
