Leyva Vazquez, Florentin Smarandache, This study addresses the ambiguities in empirical findings on artificial intelligence AI in education by proposing a new methodological framework that combines neutrosophic stance detection and Fuzzy Set Qualitative Comparative Analysis fsQCA This approach explicitly models truth indeterminacy

and falsity allowing for the synthesis of contradictory research The authors evaluated four causal hypotheses related to AI based learning using a survey of 24 university participants to explore the necessary conditions for perceived learning improvements The results indicate that the digital divide is a perfectly necessary condition for effective AI enhanced learning The findings also reveal that AI feedback and AI platform use are necessary though not sufficient for learning improvements but generate significant uncertainty The study concludes that the neutrosophic fsQCA framework is a viable technique for synthesizing ambiguous findings and provides empirical evidence that digital equity and high quality design are crucial for the successful integration of AI in education *The Publishers Weekly* ,1898 The annual American catalog ,1898
