Cutting And Grinding Fluids Selection And Application:

Cutting and Grinding Fluids Jeffrey D. Silliman, 1992 Cutting and grinding fluids at one time were considered little more than a necessary nuisance. However, they are something the metal working industry cannot do without. Today, thousands of blends of fluids provide the necessary lubricity and cooling to allow heavier feeds, higher speeds, and longer tool life demanded in the modern machining industry. Metal working fluids today need not be a nuisance if properly selected, applied, and maintained. This book provides comprehensive information on how to successfully select, apply, and maintain cutting and grinding fluids for maximum productivity, minimum waste, and safe performance. Venkata Rao, 2012-08-27

Decision Making in Manufacturing Environment Using Graph Theory and Fuzzy Multiple Attribute Decision Making Methods presents the concepts and details of applications of MADM methods. A range of methods are covered, including Analytic Hierarchy Process, AHP, Technique for Order Preference by Similarity to Ideal Solution (TOPSIS), VI ekriterijumsko KOMpromisno Rangiranje, VIKOR, Data Envelopment Analysis (DEA), Preference Ranking METHod for Enrichment Evaluations (PROMETHEE), ELimination Et Choix Traduisant la Realit (ELECTRE), COMplex PROportional ASsessment (COPRAS), Grey Relational Analysis (GRA), UTility Additive (UTA), and Ordered Weighted Averaging (OWA). The existing MADM methods are improved upon, and three novel multiple attribute decision making methods for solving the decision making problems of the manufacturing environment are proposed. The concept of integrated weights is introduced in the proposed subjective and objective integrated weights (SOIW) method, and the weighted Euclidean distance based approach (WEDBA) to consider both the decision maker's subjective preferences as well as the distribution of the attributes data of the decision matrix. These methods, which use fuzzy logic to convert the qualitative attributes into the quantitative attributes, are supported by various real world application examples. Also, computer codes for AHP, TOPSIS, DEA, PROMETHEE, ELECTRE, COPRAS, and SOIW methods are included. This comprehensive coverage makes *Decision Making in Manufacturing Environment Using Graph Theory and Fuzzy Multiple Attribute Decision Making Methods* a key reference for the designers, manufacturing engineers,
