Moral design and technology Bart Wernaart,2023-08-14 When should a surveillance system that is used in preventive policing sacrifice the privacy of citizens to prevent criminality What should be the impact of individual moral expectations when a social media platform designs an algorithm To what degree can we use technology driven deception in dementia care practices And can we create a moral compass for a dashboard society Over the last decade the impact of technological innovation has been unprecedented It has

profoundly changed the way we participate and interact in society It has also led to new moral challenges Not only because of the technology itself but also because this technology is used in the context of a globalised world with a more prominent role for the private sector This can result in moral confusion individuals who alternately assume the role of citizen and consumer feel unable to influence the design of technology that has a strong impact on their core values Sustaining this moral confusion is in nobody's long term interest In this book we propose to overcome this moral confusion by using a bottom up design approach that incubates ethics when constructing new technologies This book is composed of four parts In the first part we focus on how to integrate moral decisions and morality in the design process of new technology In the second part we assess how moral design relates to related discourse including business ethics law and policy In the third part of this book various case studies are highlighted that focus on particular moral design issues at the crossroads of technological innovation in the public and private sector In the last part we look ahead and discuss what the future might look like if we use moral design as a central approach in creating new technology This book is relevant for IT and engineering professionals business leaders and policymakers with innovation in their portfolios and students of applied science who are interested in the moral design of technology The chapters are written by experts and leading researchers in an attractive accessible and practical writing style Each chapter offers colourful examples and challenges the reader to critically think through moral decision making and the design of innovation See also the inaugural speech of Bart Wernaart on Moral Designs on YouTube

The Coming of Neo-Feudalism Joel Kotkin,2020-05-12 Following a remarkable epoch of greater dispersion of wealth and opportunity we are inexorably returning towards a more feudal era marked by greater concentration of wealth and property reduced upward mobility demographic stagnation and increased dogmatism If the last seventy years saw a massive expansion of the middle class not only in America but in much of the developed world today that class is declining and a new more hierarchical society is emerging The new class structure resembles that of Medieval times At the apex of the new order are two classes a reborn clerical elite the clerisy which dominates the upper part of the professional ranks universities media and culture and a new aristocracy led by tech oligarchs with unprecedented wealth and growing control of information These two classes correspond to the old French First and Second Estates Below these two classes lies what was once called the Third Estate This includes the yeomanry which is made up largely of small businesspeople minor property owners skilled workers and private sector oriented professionals Ascendant for much of modern history this class is in decline while those below them the new Serfs grow in numbers a vast expanding property less population The trends are mounting but we can still reverse them if people understand what is actually occurring and have the capability to oppose them
