Theory of Robot Control Carlos Canudas de Wit, Bruno Siciliano, Georges Bastin, 2012-12-06 The advent of new high speed microprocessor technology together with the need for high performance robots created substantial and realistic place for control theory in the field of robotics Since the beginning of the 80's robotics and control theory have greatly benefited from a mutual fertilization On one hand robot models inherently highly nonlinear have been used as good case studies for exemplifying general concepts of analysis and design of advanced control theory on the other hand robot manipulator by using new control algorithms Fur performance has been improved thermore many interesting robotics problems e g in mobile robots have brought new control theory research lines and given rise to the development of new controllers time varying and nonlinear Robots in control are more than a simple case study They represent a natural source of inspiration and a great pedagogical tool for research and teaching in control theory Several advanced control algorithms have been developed for different types of robots rigid flexible and mobile based either on existing control techniques e g feedback linearization and adaptive control or on new control techniques that have been developed on purpose Most of those results although widely spread are nowadays rather dispersed in different journals and conference proceedings The purpose of this book is to collect some of the most fundamental and current results on theory of robot control in a unified framework by editing improving and completing previous works in the area

Dynamics And Robust Control Of Robot-environment Interaction Miomir Vukobratovic, Dragoljub Surdilovic, Yury Ekalo, Dusko Katic, 2009-03-06 This book covers the most attractive problem in robot control dealing with the direct interaction between a robot and a dynamic environment including the human robot physical interaction It provides comprehensive theoretical and

experimental coverage of interaction control problems starting from the mathematical modeling of robots interacting with complex dynamic environments and proceeding to various concepts for interaction control design and implementation algorithms at different control layers Focusing on the learning principle it also shows the application of new and advanced learning algorithms for robotic contact tasks The ultimate aim is to strike a good balance between the necessary theoretical framework and practical aspects of interactive robots

Nonlinear Synthesis C.I. Byrnes, A.B. Kurzhanski, 2013-03-09 In its broadest sense nonlinear synthesis involves in fact the synthesis of sometimes so phisticated or complex control strategies with the aim of prescribing or at least influencing the evolution of complex nonlinear systems Nonlinear synthesis requires the development of methodologies for modeling complex systems for the analysis of nonlinear models and for the systematic design of control schemes or feedback laws which can achieve a wide variety of prescribed objectives The modeling analysis and control of complex systems in the face of uncertainty form on of the major components of the current research program in the Department of Systems and Decision Sciences SDS at the

International Institute for Applied Systems Analysis IIASA In June 1989 a IIASA workshop on Nonlinear Synthesis sponsored by SDS was held in Sopron Hungary We are proud to present this volume as the proceedings of this workshop a workshop attended by prominent researchers in nonlinear systems from both the East and the West Since the promotion and encouragement of scientific cooperation between researchers in the East and in the West is one of the goals at IIASA we feel the Sopron Conference on Nonlinear Synthesis was very successful Moreover we were especially pleased by the impressive new advances presented at the workshop which in this volume are now part of the conference record
