Converging Technologies for Improving Human Performance Mihail C. Roco, William Sims Bainbridge, 2013-04-17 M C Roco and W S Bainbridge In the early decades of the 21st century concentrated efforts can unify science based on the unity of nature thereby advancing the combination of nanotechnology biotechnology information technology and new technologies based in cognitive science With proper attention to ethical issues and societal needs converging in human abilities societal technologies could achieve a tremendous improvement outcomes the nation s productivity and the quality of life This is a broad cross cutting emerging and timely opportunity of interest to individuals society and humanity in the long term The phrase convergent technologies refers to the synergistic combination of four major NBIC nano bio info cogno provinces of science and technology each of which is currently progressing at a rapid rate a nanoscience and nanotechnology b biotechnology and biomedicine including genetic engineering c information technology including advanced computing and communications d cognitive science including cognitive neuroscience Timely and Broad Opportunity Convergence of diverse technologies is based on material unity at the nanoscale and on technology integration from that scale

Converging Technologies for Improving Human Performance Mihail C. Roco, William Sims Bainbridge, 2002 Report of a December 3 4 2001 workshop organized by the National Science Foundation and the Department of Commerce at the request of the National Science and Technology Council s Subcommittee on Nanoscale Science Engineering and Technology NSET The integration of four major Nano Bio Info Cogno NBIC areas of science and technology will enable the improvement of human performance Workshop participants explored the following areas overall potential of converging technologies expanding human cognition and communication improving human health and physical capabilities enhancing group and societal outcomes national security and unifying science and education The workshop recommended a national research and development priority area on converging technologies focused on enhancing human performance

The Coevolution of Human Potential and Converging Technologies Mihail C. Roco, Carlo D. Montemagno, 2004 The convergence of nanoscience biotechnology information technology and cognitive science NBIC offers immense opportunities for the improvement of human abilities social outcomes the nation s productivity and its quality of life it also represents a major new frontier in research and development This conclusion was reached at a December 2001 workshop held by the National Science Foundation and the Department of Commerce in which leading experts from government the academic research community and the private sector explored the nature and size of the potential opportunities in NBIC convergence The report that resulted from this workshop asserting that NBIC convergence is a broad cross cutting emerging and timely opportunity of interest to individuals society and humanity in the long term recommended that an R D initiative focusing on enhancing human performance while governed by respect for human welfare and dignity should become a national priority The NBIC Convergence 2003 conference was organized as a first step in realizing the vision of this report In this volume a panel of
