Mathematics in Service to the Community Charles Robert Hadlock,2005 Publisher description This book looks at the wide variety of ways in which math statistics and math education teachers have incorporated service learning into their courses These projects are not just stand alone community service initiatives but rather they specifically target the improvement of mathematics skills and insights of the college students in the courses with which they are associated In some cases the projects are the major focus of the courses In others they may range from an essential component to one of several options The book also speculates about heretofore untapped possibilities for service learning even including courses in pure mathematics College faculty often may not fully appreciate the wide range of support mechanisms for such ventures even within their own institutions so the book includes a lengthy chapter on the details of converting a rough idea to a solid action plan sometimes even picking up financial support and other often unexpected benefits along the way Creative teachers rarely implement a project in exactly the same way as a colleague might have so the emphasis here is to display a wide range of successful projects in order to encourage readers to develop some of their own

Arney, Donald B. Small, 2002

Mathematicians engineers and physical scientists discuss how the first two years of a core college mathematics program should change over the next five to ten years to meet the mathematical needs of partner disciplines and society's needs arising from globalization and the information age They examine issues related to goals and content anticipated advances in technology and new instructional techniques and make recommendations for future course designs that emphasize modeling inquiry and conceptual understanding Arney is dean of the School of Mathematics and Sciences at the College of Saint Rose Small is on the faculty of the Department of Mathematics at the United States Military Academy There is no subject index Annotation copyrighted by Book News Inc Portland OR *Exploring Signature Pedagogies* Regan A. Haynie, 2023-07-03 From the Foreword These authors have clearly shown the value in looking for the signature pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women's Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning

How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords

Innovations in Teaching Statistics Joan B. Garfield, 2005 This is a book of stories about teaching statistics These stories are told by fourteen different instructors of innovative statistics courses who demonstrate that learning statistics can be a positive meaningful and even exciting experience Despite the prevailing opinion that statistics courses are dull and difficult for students these stories paint quite a different picture In the classes of the instructors whose stories fill this book students are engaged in learning are empowered to do statistics and appreciate the instructional methods of their teachers The instructors profiled in this book are inspiring dedicated teachers who have devoted considerable effort to creating courses and materials that enable students to successfully learn statistics Each chapter begins by describing how the author became a teacher of statistics then provides details about the courses they currently teach describing their teaching method textbook types of student assessments and uses of technology One typical class is described in detail to provide a snapshot of what each person's teaching looks like The writers then tell the story of the process they went through in developing an innovative course and conclude their chapters with a discussion of their future plans for course revision or development As you read these stories you will learn about some great activities some helpful technological tools and some innovative assessment methods By reading these stories teachers of statistics will understand and be motivated to try different ways to implement reform recommendations so that these recommendations may continue to lead to a variety of new materials activities and teaching approaches I hope that teachers of statistics may be inspired by these stories and feel encouraged to try new methods leave behind more traditional approaches to teaching statistics and carefully examine the effect of their teaching on student learning Publisher
