Modeling of Pipeline Corrosion Control by Cathodic Protection Mohammed Hafiz,2012-07 Modeling of pipeline corrosion control by cathodic protection has been made It can augment the design process and present a number of experimentally determined factors that should be applied to present modeling code development To improve the computational approach to cathodic protection system design for bare and coated pipe different factors e g environment resistivity different coating materials current density location of anode and attenuation potential along the pipe must be taken into account It is found that polyethylene tape coating is more proper than other coatings which act to electrically isolate the pipeline from its surroundings thus cutting off the return electron path and preventing the formation of a corrosion cell Coatings protect more than 99% of the pipe surface Increasing the environment resistivity decreases corrosion rate and current density Moreover location of anode can be controlled by potential and current density which has a major effect on corrosion rate of partial cathodic protection Environment resistivity affects limiting current density which is found to be important Pipeline Corrosion Control ,2002 *Pipeline Corrosion Control Level 2 Trainee Guide* NCCER,National Center for Construction Education and Research (U.S.),2018 This exceptionally produced trainee guide features a highly illustrated design technical hints and tips from industry experts review questions and a whole lot more Key content includes AOCFG 17 Abnormal Operating Conditions Field Gas CT1_1 17 Measure Structure to Soil Potentials CT1_2 17 Conduct Close Interval Survey

Recommended Practice for Corrosion Management of Pipelines in Oil & Gas Production and Transportation

Bijan Kermani, 2017-12-02 First Published in 2017 Pipeline integrity is key to maintaining operational success safety and security and minimising harm to the environment Corrosion is a dominant contributory factor to failures leaks and integrity threats in pipelines Therefore its optimum control within an integrity management framework is paramount for the cost effective design of facilities and ensuring continued uninterrupted and safe operations within the expected design life This recommended practice RP is a compendium of current best practices and state of the art knowledge by major operators engineering contractors and service companies involved in hydrocarbon production and transportation The RP incorporates some minimum operational requirements and practices to ensure that when managing corrosion in pipelines fundamental principles are followed It covers management of corrosion for pipelines carrying hydrocarbons injection water and or produced water from design to decommissioning It is structured to follow the logical steps of a basic corrosion management process and makes references to relevant and available international standards and or recommended practices It is intended for use by personnel from the petroleum industry having knowledge of corrosion and materials It is hoped that this RP will prove to be a key reference document for engineers suppliers and contractors working in the oil and gas industry paving the way for corrosion free operation of pipelines with the ultimate goal of improving safety security and minimising the impact on the environment
