Controlling Chaos And Bifurcations In Engineering Systems:

Controlling Chaos and Bifurcations in Engineering Systems Guanrong Chen, 1999-09-28 Over the last two decades chaos in engineering systems has moved from being simply a curious phenomenon to one with real practical significance and utility Engineers scientists and mathematicians have similarly advanced from the passive role of analyzing chaos to their present active role of controlling chaos control directed not only at suppression but also at exploiting its enormous potential We now stand at the threshold of major advances in the control and synchronization of chaos for new applications across the range of engineering disciplines Controlling Chaos and Bifurcations in Engineering Systems provides a state of the art survey of the control and anti control of chaos in dynamical systems Internationally known experts in the field join forces in this volume to form this tutorial style combination of overview and technical report on the latest advances in the theory and applications of chaos control They detail various approaches to control and show how designers can use chaos to create a wider variety of properties and greater flexibility in the design process Chaos control promises to have a major impact on novel time and energy critical engineering applications Within this volume readers will find many challenging problems yet unsolved regarding both the fundamental theory and potential applications of chaos control and anti control Controlling Chaos and Bifurcations in Engineering Systems will bring readers up to date on recent development in the field and help open the door to new advances

Bifurcation Control Guanrong Chen, David John Hill, Xinghuo Yu, 2003-08-26 Bifurcation control refers to the task of designing a controller that can modify the bifurcation properties of a given nonlinear system so as to achieve some desirable dynamical behaviors There exists no similar control theory oriented book available in the market that is devoted to the subject of bifurcation control written by control engineers for control engineers World renowned leading experts in the field provide their state of the art survey about the extensive research that has been done over the last few years in this subject The book is not only aimed at active researchers in the field of bifurcation control and its applications but also at a general audience in related fields

Dynamics, Bifurcations and Control Fritz Colonius, Lars Grüne, 2003-07-01 This volume originates from the Third Nonlinear Control Workshop Dynamics Bifurcations and Control held in Kloster Irsee April 13 2001 As the preceding workshops held in Paris 2000 and in Ghent 1999 it was organized within the framework of Nonlinear Control Network funded by the European Union <http://www.supelec.fr/lss/NCN> The papers in this volume center around those control problems where phenomena and methods from dynamical systems theory play a dominant role Despite the large variety of techniques and methods present in the contributions a rough subdivision can be given into three areas Bifurcation problems stabilization and robustness and global dynamics of control systems A large part of the fascination in nonlinear control stems from the fact that it is deeply rooted in engineering and mathematics alike The contributions to this volume reflect this double nature of nonlinear control We would like to take this opportunity to thank all the contributors and the referees for their careful work Furthermore it is our pleasure to thank Franchise Lamnabhi

Lagarigue the coordinator of our network for her support in organizing the workshop and the proceedings and for the tremendous efforts she puts into this network bringing the cooperation between the different groups to a new level In particular the exchange and the active participation of young scientists also reflected in the Pedagogical Schools within the Network is an asset for the field of nonlinear control

CONTROL SYSTEMS, ROBOTICS AND AUTOMATION -

Volume XIII Heinz D. Unbehauen, 2009-10-11 This Encyclopedia of Control Systems Robotics and Automation is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This 22 volume set contains 240 chapters each of size 5000-30000 words with perspectives applications and extensive illustrations It is the only publication of its kind carrying state of the art knowledge in the fields of Control Systems Robotics and Automation and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs

New Trends in Nonlinear Dynamics and Control, and their Applications Wei Kang, Mingqing Xiao, Carlos Borges, 2003-09-16 A selection of papers exploring a wide spectrum of new trends in nonlinear dynamics and control such as bifurcation control state estimation and reconstruction analysis of behavior and stabilities dynamics of nonlinear neural network models and numerical algorithms The papers focus on new ideas and the latest developments in both theoretical and applied research topics of nonlinear control Because many of the authors are leading researchers in their own fields the papers presented in this volume reflect the state of the art in the areas of nonlinear dynamics and control Many of the papers in this volume were first presented at the highly successful Symposium on New Trends in Nonlinear Dynamics and Control and Their Applications held October 18-19 2002 in Monterey California

Impulsive Systems and

Control Tao Yang, 2001 An impulsive control system contains a plant usually a continuous time dynamical system and a control law In the past ten years many developments have occurred regarding control systems with impulsive effects or control systems via impulsive control laws Impulsive effects can take place in plant dynamics or be introduced through control laws This book studies the two main types of control systems First are the controlling impulsive systems in which the plant itself is formed by impulsive differential equations so the control law will be either continuous or impulsive In engineering the impulsive control serves as a crucial method for making nanodevices The second control systems are impulsively controlled dynamical systems where the plant has no impulsive effects though the control laws introduce impulsive effects to the plant's state variables The engineering application here is within nonlinear communications This book offers mathematicians real applications of equations engineers a toolbox and math theory for control problems and physicists a new framework of modelling impulsive effects
