Convective Instabilities In Systems With Interface:

Convective Instabilities in Systems with Interface Ilya B. Simanovskii, Alexandre A. Nepomnyashchy, 1993 The authors use a sophisticated analytical and numerical approach to solve linear and non linear problems associated with the loss of equilibrium and motion in systems containing phase boundaries The Emphasis is placed on explaining and comparing theory and experiment Discussions of this study s practical applications include mass exchange in the chemical industry production of superpure alloys in microgravity and the storage of liquid hydrocarbons in underground reservoirs Convective Instabilities in Systems with Interface provides an in depth view of problems related to hydrodynamic instabilities induced by interface phenomena between liquid media in microgravity conditions also known as the Rayleigh Marangoni Bernard paradigm Ilya B Simanovskii is professor of Theoretical Physics at Perm Pedagogical Institute Russia and Alexandre A Nepomnyashchy is professor of Mathematics at the Technion Israel s Institute of Technology Haifa Israel

Interfacial Fluid Dynamics and Transport Processes Ranga Narayanan, Dietrich Schwabe, 2013-06-29 Springer Verlag has been pleased to bring out this special volume on interfacial uid dynamics and transport processes There are seventeen articles and each article is written in a pedagogical manner dealing with relevant research issues and questions The intended audience is post doctoral scientists academicians and graduate students intending to pursue research and it is our hope that this volume will have lasting value Several issues arise within the general eld of interfacial transport such as the instability of interfacial processes and driven ows Instabilities occur when there is a sudden change in the structure of a solution as a control parameter is smoothly varied They are usually accompanied by a change in the patterns in uid ow or temperature and concentration elds Transport phenomena related instability at the interface has much of its origin in the seminal works of Rayleigh who in the later part of the 19th century worked on jets gravitationally unstably stratified uid layers and on the rst ideas on convection Some of these ideas were subsequently modified by the work of Marangoni Block and Pearson on surface tension driven instabilities Over the years similar concepts have found place in solidification and melting electrodeposition and other phase change problems

Self-Organization in Electrochemical Systems II Marek Orlik, 2012-09-13 This is the second of two volumes offering the very first comprehensive treatise of self organization and non linear dynamics in electrochemical systems The first volume covers general principles of self organization as well as temporal instabilities The content of both volumes is organized so that each description of a particular electrochemical system is preceded by an introduction to basic concepts of nonlinear dynamics in order to help the reader unfamiliar with this discipline to understand at least fundamental concepts and the methods of stability analysis The presentation of the systems is not limited to laboratory models but stretches out to real life objects and processes including systems of biological importance such as neurons in living matter Marek Orlik presents a comprehensive and consistent survey of the field
