Kruse, 2013-11-18 In this book we analyze the error caused by numerical schemes for the approximation of semilinear stochastic evolution equations SEEq in a Hilbert space valued setting The numerical schemes considered combine Galerkin finite element methods with Euler type temporal approximations Starting from a precise analysis of the spatio temporal regularity of the mild solution to the SEEq we derive and prove optimal error estimates of the strong error of convergence in the first part of the book The second part deals with a new approach to the so called weak error of convergence which measures the distance between the law of the numerical solution and the law of the exact solution This approach is based on Bismut's integration by parts formula and the Malliavin calculus for infinite dimensional stochastic processes These techniques are developed and explained in a separate chapter before the weak convergence is proven for linear SEEq

**Stochastic Models in Biological Sciences** Reinhard Bürger, Christian Maes, Jacek Miękiński, 2008 Summary This volume contains papers presented at the workshop Stochastic Models in Biological Sciences held at the Stefan Banach International Mathematical Center in Warsaw 29 May 2 June 2006 Preface p 5 *Numerical Methods for Stochastic Partial Differential Equations with White Noise* Zhongqiang Zhang, George Em Karniadakis, 2017-09-01 This book covers numerical methods for stochastic partial differential equations with white noise using the framework of Wong Zakai approximation The book begins with some motivational and background material in the introductory chapters and is divided into three parts Part I covers numerical stochastic ordinary differential equations Here the authors start with numerical methods for SDEs with delay using the Wong Zakai approximation and finite difference in time Part II covers temporal white noise Here the authors consider SPDEs as PDEs driven by white noise where discretization of white noise Brownian motion leads to PDEs with smooth noise which can then be treated by numerical methods for PDEs In this part recursive algorithms based on Wiener chaos expansion and stochastic collocation methods are presented for linear stochastic advection diffusion reaction equations In addition stochastic Euler equations are exploited as an application of stochastic collocation methods where a numerical comparison with other integration methods in random space is made Part III covers spatial white noise Here the authors discuss numerical methods for nonlinear elliptic equations as well as other equations with additive noise Numerical methods

for SPDEs with multiplicative noise are also discussed using the Wiener chaos expansion method In addition some SPDEs driven by non Gaussian white noise are discussed and some model reduction methods based on Wick Malliavin calculus are presented for generalized polynomial chaos expansion methods Powerful techniques are provided for solving stochastic partial differential equations This book can be considered as self contained Necessary background knowledge is presented in the appendices Basic knowledge of probability theory and stochastic calculus is presented in Appendix A In Appendix B some semi analytical methods for SPDEs are presented In Appendix C an introduction to Gauss quadrature is provided In Appendix D all the conclusions which are needed for proofs are presented and in Appendix E a method to compute the convergence rate empirically is included In addition the authors provide a thorough review of the topics both theoretical and computational exercises in the book with practical discussion of the effectiveness of the methods Supporting Matlab files are made available to help illustrate some of the concepts further Bibliographic notes are included at the end of each chapter This book serves as a reference for graduate students and researchers in the mathematical sciences who would like to understand state of the art numerical methods for stochastic partial differential equations with white noise
