Convex Analysis and Nonlinear Optimization Jonathan M. Borwein, Adrian S.

Lewis, 2005-11-30 Optimization is a rich and thriving mathematical discipline and the underlying theory of current computational optimization techniques grows ever more sophisticated This book aims to provide a concise accessible account of convex analysis and its applications and extensions for a broad audience Each section concludes with an often extensive set of optional exercises This new edition adds material on semismooth optimization as well as several new proofs

An Introduction to Convexity, Optimization, and Algorithms Heinz H. Bauschke, Walaa M. Moursi, 2023-12-20 This concise self contained volume introduces convex analysis and optimization algorithms with an emphasis on bridging the two areas It explores cutting edge algorithms such as the proximal gradient Douglas Rachford Peaceman Rachford and FISTA that have applications in machine learning signal processing image reconstruction and other fields An Introduction to Convexity Optimization and Algorithms contains algorithms illustrated by Julia examples and more than 200 exercises that enhance the reader s understanding of the topic Clear explanations and step by step algorithmic descriptions facilitate self study for individuals looking to enhance their expertise in convex analysis and optimization Designed for courses in convex analysis numerical optimization and related subjects this volume is intended for undergraduate and graduate students in mathematics

computer science and engineering Its concise length makes it ideal for a one semester course Researchers and professionals in applied areas such as data science and machine learning will find insights relevant to their work *Fixed Point Optimization Algorithms and Their Applications* Watcharaporn Chalamjiak,2024-11-23 Fixed Point Optimization Algorithms and Their Applications discusses how the relationship between fixed point algorithms and optimization problems is connected and demonstrates hands on applications of the algorithms in fields such as image restoration signal recovery and machine learning The book is divided into nine chapters beginning with foundational concepts of normed linear spaces Banach spaces and Hilbert spaces along with nonlinear operators and useful lemmas and theorems for proving the book s main results The author presents algorithms for nonexpansive and generalized nonexpansive mappings in Hilbert space and presents solutions to many optimization problems across a range of scientific research and real world applications From foundational concepts the book proceeds to present a variety of optimization algorithms including fixed point theories convergence theorems variational inequality problems minimization problems split feasibility problems variational inclusion problems and equilibrium problems Fixed Point Optimization Algorithms and Their Applications equips readers with the theoretical mathematics background and necessary tools to tackle challenging optimization problems involving a range of algebraic methods empowering them to apply these techniques in their research professional work or academic pursuits Demonstrates how to create hybrid algorithms for many optimization problems with non expansive mappings to solve real world problems Shows readers how to solve image restoration problems using optimization algorithms Includes coverage of signal recovery problems using optimization algorithms Shows readers how to solve data classification problems using optimization algorithms in machine learning with many types of datasets such as those used in medicine mathematics computer science and engineering Optimization of Complex Systems: Theory, Models, Algorithms and Applications Hoai An Le Thi,Hoai Minh Le,Tao Pham Dinh,2019-06-15 This book contains 112 papers selected from about 250 submissions to the 6th World Congress on Global Optimization WCGO 2019 which takes place on July 8 10 2019 at University of Lorraine Metz France The book covers both theoretical and algorithmic aspects of Nonconvex Optimization as well as its applications to modeling and solving decision problems in various domains It is composed of 10 parts each of them deals with either the theory and or methods in a branch of optimization such as Continuous optimization DC Programming and DCA Discrete optimization Network optimization Multiobjective programming Optimization under uncertainty or models and optimization methods in a specific application area including Data science Economics Finance Energy Water management Engineering systems Transportation Logistics Resource allocation Production management The researchers and practitioners working in Nonconvex Optimization and several application areas can find here many inspiring ideas and useful tools techniques for their works Nonsmooth Optimization and Its Applications Seyedehsomayeh Hosseini,Boris S. Mordukhovich,André Uschmajew,2019-03-29 Since nonsmooth optimization problems arise in a diverse range of real world applications the

potential impact of efficient methods for solving such problems is undeniable Even solving difficult smooth problems sometimes requires the use of nonsmooth optimization methods in order to either reduce the problem s scale or simplify its structure Accordingly the field of nonsmooth optimization is an important area of mathematical programming that is based on by now classical concepts of variational analysis and generalized derivatives and has developed a rich and sophisticated set of mathematical tools at the intersection of theory and practice This volume of ISNM is an outcome of the workshop Nonsmooth Optimization and its Applications which was held from May 15 to 19 2017 at the Hausdorff Center for Mathematics University of Bonn The six research articles gathered here focus on recent results that highlight different aspects of nonsmooth and variational analysis optimization methods their convergence theory and applications
