Convex Bodies The Brunn Minkowski Theory:

Convex Bodies: The Brunn-Minkowski Theory Rolf Schneider, 2014 A complete presentation of a central part of convex geometry from basics for beginners to the exposition of current research **Convex Bodies** Rolf Schneider, 1993-02-25 A comprehensive introduction to convex bodies giving full proofs for some deeper theorems which have never previously been brought together **Convex Bodies** Rolf Schneider, 1993 **Theory of Convex Bodies** Tommy Bonnesen, Werner Fenchel, 1987 [Approximation Theory and Analytic Inequalities](#) Themistocles M. Rassias, 2021-07-21 This contributed volume focuses on various important areas of mathematics in which approximation methods play an essential role It features cutting edge research on a wide spectrum of analytic inequalities with emphasis on differential and integral inequalities in the spirit of functional analysis operator theory nonlinear analysis variational calculus featuring a plethora of applications making this work a valuable resource The reader will be exposed to convexity theory polynomial inequalities extremal problems prediction theory fixed point theory for operators PDEs fractional integral inequalities multidimensional numerical integration Gauss Jacobi and Hermite Hadamard type inequalities Hilbert type inequalities and Ulam s stability of functional equations Contributions have been written by eminent researchers providing up to date information and several results which may be useful to a wide readership including graduate students and researchers working in mathematics physics economics operational research and their interconnections

Hermitian-Grassmannian Submanifolds Young Jin Suh, Yoshihiro Ohnita, Jiazu Zhou, Byung Hak Kim, Hyunjin Lee, 2017-09-14 This book presents the proceedings of the 20th International Workshop on Hermitian Symmetric Spaces and Submanifolds which was held at the Kyungpook National University from June 21 to 25 2016 The Workshop was supported by the Research Institute of Real and Complex Manifolds RIRCM and the National Research Foundation of Korea NRF The Organizing Committee invited 30 active geometers of differential geometry and related fields from all around the globe to discuss new developments for research in the area These proceedings provide a detailed overview of recent topics in the field of real and complex submanifolds *Geometry of Isotropic Convex Bodies* Silouanos Brazitikos, Apostolos Giannopoulos, Petros Valettas, Beatrice-Helen Vritsiou, 2014-04-24 The study of high dimensional convex bodies from a geometric and analytic point of view with an emphasis on the dependence of various parameters on the dimension stands at the intersection of classical convex geometry and the local theory of Banach spaces It is also closely linked to many other fields such as probability theory partial differential equations Riemannian geometry harmonic analysis and combinatorics It is now understood that the convexity assumption forces most of the volume of a high dimensional convex body to be concentrated in some canonical way and the main question is whether under some natural normalization the answer to many fundamental questions should be independent of the dimension The aim of this book is to introduce a number of well known questions regarding the distribution of volume in high dimensional convex bodies which are exactly of this nature among

them are the slicing problem the thin shell conjecture and the Kannan Lov sz Simonovits conjecture This book provides a self contained and up to date account of the progress that has been made in the last fifteen years **Modern Discrete**

Mathematics and Analysis Nicholas J. Daras,Themistocles M. Rassias,2018-07-05 A variety of modern research in analysis and discrete mathematics is provided in this book along with applications in cryptographic methods and information security in order to explore new techniques methods and problems for further investigation Distinguished researchers and scientists in analysis and discrete mathematics present their research Graduate students scientists and engineers interested in a broad spectrum of current theories methods and applications in interdisciplinary fields will find this book invaluable **Convex**

Geometry of Orbits Grigoriy Blekherman,2005 **Lectures on Convex Geometry** Daniel Hug,Wolfgang Weil,2020-08-27

This book provides a self contained introduction to convex geometry in Euclidean space After covering the basic concepts and results it develops Brunn Minkowski theory with an exposition of mixed volumes the Brunn Minkowski inequality and some of its consequences including the isoperimetric inequality Further central topics are then treated such as surface area measures projection functions zonoids and geometric valuations Finally an introduction to integral geometric formulas in Euclidean space is provided The numerous exercises and the supplementary material at the end of each section form an essential part of the book Convexity is an elementary and natural concept It plays a key role in many mathematical fields including functional analysis optimization probability theory and stochastic geometry Paving the way to the more advanced and specialized literature the material will be accessible to students in the third year and can be covered in one semester

Congressus Numerantium ,2003 **Convex Geometry** Shiri Artstein-Avidan,Gabriele Bianchi,Andrea Colesanti,Paolo Gronchi,Daniel Hug,Monika Ludwig,Fabian Mussnig,2023-12-13 This book collects the lecture notes of the Summer School on Convex Geometry held in Cetraro Italy from August 30th to September 3rd 2021 Convex geometry is a very active area in mathematics with a solid tradition and a promising future Its main objects of study are convex bodies that is compact and convex subsets of n dimensional Euclidean space The so called Brunn Minkowski theory currently represents the central part of convex geometry The Summer School provided an introduction to various aspects of convex geometry The theory of valuations including its recent developments concerning valuations on function spaces geometric and analytic inequalities including those which come from the L_p Brunn Minkowski theory geometric and analytic notions of duality along with their interplay with mass transportation and concentration phenomena symmetrizations which provide one of the main tools to many variational problems not only in convex geometry Each of these parts is represented by one of the courses given during the Summer School and corresponds to one of the chapters of the present volume The initial chapter contains some basic notions in convex geometry which form a common background for the subsequent chapters The material of this book is essentially self contained and like the Summer School is addressed to PhD and post doctoral students and to all researchers approaching convex geometry for the first time **Annales de la faculté des sciences de Toulouse** ,1979 **Revista**
