Dubois, Alexei Gvishiani, 2013-03-13 This book is the latest volume in the series entitled Data and Knowledge in a Changing World published by the Committee on Data for Science and Technology CODATA of the International Council of Scientific Unions Icsu This series was established to collect together from many diverse fields the wealth of information pertaining to the intelligent exploitation of data in the conduct of science and technology This volume is the first in a two volume series that will discuss techniques for the analysis of natural dynamic systems and their applications to a variety of geophysical problems The present volume lays out the theoretical foundations for these techniques The second volume will use these techniques in applications to fields such as seismology geodynamics geoelectricity geomagnetism aeromagnetism topography and bathymetry The book consists of two parts which describe two complementary approaches to the analysis of natural systems The first written by Alexei Gvishiani deals with dynamic pattern recognition It lays out the mathematical theory and the formalized algorithms that forms the basis for the classification of vector objects and the use of this classification in the study of dynamical systems with particular emphasis on the prediction of system behavior in space and time It discusses the construction of classification schemes and the evaluation of their stability and reliability Artificial

Intelligence and Dynamic Systems for Geophysical Applications Alexej Gvishiani, Jacques O. Dubois, 2013-04-17 The book presents new clustering schemes dynamical systems and pattern recognition algorithms in geophysical geodynamical and natural hazard applications The original mathematical technique is based on both classical and fuzzy sets models Geophysical and natural hazard applications are mostly original However the artificial intelligence technique described in the book can be applied far beyond the limits of Earth science applications The book is intended for research scientists tutors graduate students scientists in geophysics and engineers **Heat-Mass Transfer and Geodynamics of the Lithosphere** Valentina

Svalova, 2021-04-09 This volume is devoted to investigation of all aspects of heat mass transfer processes at different scales and from various origins as well as the formation and evolution of geological structures These phenomena are linked to geophysical properties of rocks geothermal resources geothermics fluid dynamics stress state of the lithosphere deep geodynamics plate tectonics and seismicity among others The book consists of two main parts The first concerns heat mass transfer associated with natural and technogenic processes in the upper lithosphere The second deals with geodynamics and seismicity The collection of over 25 chapters from leading investigators in Russia is thus an important contribution to research on the lithosphere in connection with formation and evolution of geological structures heat and mass transfer processes in the lithosphere and their connection with deep Earth geodynamics Collects a range of research methodologies including application of modelling seismic tomography geological field works geological geophysical methods and in situ measurements through instrumentation Explains how a wide range of geological and geophysical phenomena arising in the

Earth's lithosphere can be investigated under the umbrella of a common approach to heat mass transfer processes Includes the latest research by more than 60 leading scientists from Russia **Disaster Risk Reduction and Resilience** Muneta Yokomatsu, Stefan Hochrainer-Stigler, 2020-07-01 This book provides insight on how disaster risk management can increase the resilience of society to various natural hazards The multi dimensionality of resilience and the various different perspectives in regards to disaster risk reduction are taken explicitly into account by providing studies and approaches on different scales and ranging from natural science based methods to social science frameworks For all chapters special emphasis is placed on implementation aspects and specifically in regards to the targets and priorities for action laid out in the Sendai Framework for Disaster Risk Reduction The chapters provide also a starting point for interested readers on specific issues of resilience and therefore include extensive reference material and important future directions for research
