Dynamic Syntax The Flow Of Language Understanding:

Dynamic Syntax Ruth Kempson, Wilfried Meyer-Viol, Dov M. Gabbay, 2000-12-22 This ground breaking volume sets out an original model of the dynamics of language processing which can be used to explain the structural properties of language in a simple and elegant way The model is introduced both informally and formally and is applied to a range of languages

Pronouns □ Grammar and Representation Horst J. Simon, Heike Wiese, 2002-09-27 The contributions of this thematic collection center around the typology of pronominal paradigms the generation of syntactic and semantic representations for constructions containing pronouns and the neurological underpinnings for linguistic distinctions that are relevant for the production and interpretation of these constructions They come from different theoretical approaches and methodological backgrounds and take into account data from a wide range of Indoeuropean and non Indoeuropean languages Bringing together a cross section of recent research on the grammar and representation of pronouns the volume offers a kaleidoscope of studies united by the common topic of pronouns as a domain of language that exemplarily shows the interaction of different components responsible for computational syntactic and semantic lexical and discourse pragmatic processes

Approaches to Complex Predicates Léa Nash, Pollet Samvelian, 2016-04-26 Complex predicates can be loosely defined as a sequence of items that behave as a single predicate projecting a single argument structure within a clause Each of the members of the predicate contributes part of the information ordinarily associated with a single head The present volume presents a collection of theoretical linguistic results on the study of complex predicates in different perspectives and with a variety of approaches Important empirical and theoretical issues cutting across various subfields of linguistics are being addressed in this book such as Syntactic and semantic modeling of complex predicate formation compositionality argument structure event structure Differences between syntactic and morphological processes of lexeme formation Typological and diachronic issues in complex predicate formation Neo Davidsonian analyses of abstract predicate decomposition and its morphological correlates Contributors are Ane Berro Denis Creissels Hannah Gibson Adele Goldberg Lutz Marten Annie Montaut L a Nash Pooja Paul Pollet Samvelian Peter Svenonius and Susanne Wurmbrand Historical Linguistics 2005 Joe Salmons, Shannon Dubenion-Smith, 2007 Printbegr nsninger Der kan printes 10 sider ad gangen og max 40 sider pr session

Text, Speech and Dialogue Petr Sojka, Ivan Kopecek, Karel Pala, 2006-09-08 Here are the refereed proceedings of the 9th International Conference on Text Speech and Dialogue TSD 2006 The book presents 87 revised full papers together with 2 invited papers reviewing state of the art research in the field of natural language processing Coverage ranges from theoretical and methodological issues to applications with special focus on corpora texts and transcription speech analysis recognition and synthesis as well as their intertwining within NL dialogue systems **Text, Speech and Dialogue** , 2000

Language Engineering for Lesser-studied Languages Sergei Nirenburg, 2009 Technologies enabling computers to process specific languages facilitate economic and political progress of societies where these languages are spoken

Development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world As work on systems and resources for the lower density languages becomes more widespread an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower density languages This issue has been at the core of the NATO Advanced Studies Institute on language technologies for middle and low density languages held in Georgia in October 2007 This publication is a collection of publication oriented versions of the lectures presented there and is a useful source of knowledge about many core facets of modern computational linguistic work By the same token it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational linguistic capabilities for lesser studied languages either from scratch or using components developed for other languages The book should also be quite useful in teaching practical system and resource building topics in computational linguistics Site Web de l'éditeur **Journal of Linguistics** ,2017 Peripheries David Adger,Cécile de Cat,George Tsoulas,2006-01-14 The syntactic periphery has become one of the most important areas of research in syntactic theory in recent years due to the emergence of new research programmes initiated by Rizzi Kayne and Chomsky However research has concentrated on the empirical nature of clausal peripheries The purpose of this volume is to explore the question of whether the notion of periphery has any real theoretical bite An important consensus emerging from the volume is that the edges of certain syntactic expressions appear to be the locus of the connection between phrase structure prosody and information structure This volume contains 16 papers by researchers in this area The book contains an extensive introduction setting out the research questions addressed and setting the contributions in an overall theoretical context has a distinct comparative slant brings together work from a range of theoretical perspectives while maintaining a unity of purpose could serve as the basis for a graduate course on peripheral positions contains papers addressing the question of the fine grainedness of syntactic representations the relevance of syntactic edges to locality and semantic interpretation the nature of the dependencies connecting peripheral elements to the syntactic core Audience Academics and graduate students interested in syntax and its interfaces with semantics and prosody acquisition of syntax cross linguistic comparison **Proceedings of the ...
