Dynamical Systems Approaches to Nonlinear Problems in Systems and Circuits Fathi M. Abdel Salam, Mark Levi, 1988-01-01 **2-d Quadratic Maps And 3-d Ode Systems: A Rigorous Approach** Zeraoulia Elhadj, Julien Clinton Sprott, 2010-07-08 This book is based on research on the rigorous proof of chaos and bifurcations in 2 D quadratic maps especially the invertible case such as the Hénon map and in 3 D ODE s especially piecewise linear systems such as the Chua s circuit In addition the book covers some recent works in the field of general 2 D quadratic maps especially their classification into equivalence classes and finding regions for chaos hyperchaos and non chaos in the space of bifurcation parameters Following the main introduction to the rigorous tools used to prove chaos and bifurcations in the two representative systems is the study of the invertible case of the 2 D quadratic map where previous works are oriented toward Hénon mapping 2 D quadratic maps are then classified into 30 maps with well known formulas Two proofs on the regions for chaos hyperchaos and non chaos in the space of the bifurcation parameters are presented using a technique based on the second derivative test and bounds for Lyapunov exponents Also included is the proof of chaos in the piecewise linear Chua s system using two methods the first of which is based on the construction of Poincaré map and the second is based on a computer assisted proof Finally a rigorous analysis is provided on the bifurcational phenomena in the piecewise linear Chua s system using both an analytical 2 D mapping and a 1 D approximated Poincaré mapping in addition to other analytical methods **Bifurcation and Chaos in Complex Systems** , 2006-06-30 The book presents the recent achievements on bifurcation studies of nonlinear dynamical systems The contributing authors of the book are all distinguished researchers in this interesting subject area The first two chapters deal with the fundamental theoretical issues of bifurcation analysis in smooth and non smooth dynamical systems The cell mapping methods are presented for global bifurcations in stochastic and deterministic nonlinear dynamical systems in the third chapter The fourth chapter studies bifurcations and chaos in time varying parametrically excited nonlinear dynamical systems The fifth chapter presents bifurcation analyses of modal interactions in distributed nonlinear dynamical systems of circular thin von Karman plates The theories methods and results presented in this book are of great interest to scientists and engineers in a wide range of disciplines This book can be adopted as references for mathematicians scientists engineers and graduate students conducting research in nonlinear dynamical systems New Views for Difficult Problems Novel Ideas and Concepts Hilbert s 16th Problem Normal Forms in Polynomial Hamiltonian Systems Grazing Flow in Non smooth Dynamical Systems Stochastic and Fuzzy Nonlinear Dynamical Systems Fuzzy Bifurcation Parametrical Nonlinear Systems Mode Interactions in nonlinear dynamical systems Mathematical Control Theory Eduardo D. Sontag, 2013-11-21 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the
