## **Dynamics Of Communicative Development:**

*Dynamics and indeterminism in Developmental and Social Processes* Alan Fogel, Maria C.D.P. Lyra, Jaan Valsiner, 2014-02-04 One of the most profound insights of the dynamic systems perspective is that new structures resulting from the developmental process do not need to be planned in advance nor is it necessary to have these structures represented in genetic or neurological templates prior to their emergence Rather new structures can emerge as components of the individual and the environment self organize that is as they mutually constrain each other's actions new patterns and structures may arise This theoretical possibility brings into developmental theory the important concept of indeterminism the possibility that developmental outcomes may not be predictable in any simple linear causal way from their antecedents This is the first book to take a critical and serious look at the role of indeterminism in psychological and behavioral development What is the source of this indeterminism What is its role in developmental change Is it merely the result of incomplete observational data or error in measurement It reviews the concepts of indeterminism and determinism in their historical philosophical and theoretical perspectives particularly in relation to dynamic systems thinking and applies these general ideas to systems of nonverbal communication Stressing the indeterminacy inherent to symbols and meaning making in social systems several chapters address the issue of indeterminism from metaphorical modeling and narrative perspectives Others discuss those indeterministic processes within the individual related to emotional social and cognitive development *The Dynamics of Communicative Development* Vera W. *A Dynamic Theory of Communication* Orlando Gomes,2009 Communication is a dynamic and complex process The study of human communication introduces us to a world of multiple scenarios agents variables and interconnections which are important to understand As in any scientific discipline the compromise between abstraction and a rigorous analysis on one hand and the need to discuss subjects in all their complexity and deepness on the other hand is a difficult task and some simplifications and shortcomings become inevitable In the analysis of such a wide and pervasive subject as is communication it is necessary to choose a path to define strategies of analysis and to formulate concrete problems In this book communication is worked on the basis of mathematical models that deal with relations between variables of the communicational process Centring the attention on the notion of dynamic process techniques of intertemporal analysis and

optimal control are considered with the goal of highlighting and reinforcing some of the main ideas that the communication theory has produced and explored in the last few decades
