*Dynamic Interactions in Neural Networks* Michael A Arbib, Shun-Ichi Amari, 1988-12-01      **Dynamic Interactions in Neural Networks: Models and Data** Michael A. Arbib, 1989 The study of neural networks is enjoying a great renaissance both in computational neuroscience the development of information processing models of living brains and in neural computing the use of neurally inspired concepts in the construction of intelligent machines Thus the title of this volume has two interpretations It presents models and data on the dynamic interactions occurring in the brain and it exhibits the dynamic interactions between research in computational neuroscience and in neural computing as scientists seek to find common principles to guide the understanding of the living brain and the design of artificial neural networks This collection of contributions presents the current state of research future trends and open problems in an exciting field of today s science

**Interpersonal Synchrony and Network Dynamics in Social Interaction, volume II** Viktor Müller, Peter Erik Keller, Merle Theresa Fairhurst, Markus Franziskus Mueller, Floris Tijmen Van Vugt, 2025-09-15 Coordinated social interaction belongs to our everyday life whenever individuals align their behavior with each other in time and space A substantial part of social interaction and collective behavior consists in synchronized goal directed actions involving two or more individuals These actions are regulated by various factors that work together calibrated by appropriate coupling mechanisms within and between individuals and their brains Hyperscanning studies simultaneous signal recording from multiple individuals has shown that synchronization within and between brains as well as within and between physiological systems and subsystems e g respiratory cardiac systems body movements etc plays a crucial role for social interaction phenomena They can be

described most effectively in terms of the cooperation of several parts of the system or subsystems Emerging complex network dynamics and its topology represent an imprint of such complex systems behavior and have been outlined in several studies by means of a graph theoretical approach There has been an important growth in publications on inter brain or hyper brain connectivity and network dynamics over the last 20 years However a certain knowledge gap remains between behavioral and neural and also other physiological and physical representations or features and it requires further intensive research
