## **Dynamics Of Brain Monoamines:**

**Dynamics of Brain Monoamines** J. De La Torre, 2014-01-15      **Dynamics of Brain Monoamines** Jack C. De La Torre, 1972-05 The noted French physiologist Claude Bernard was fond of noting that experimental ideas are often born by chance with the help of some casual observation If history teaches us we realize that this statement is as true today as it was 100 years ago Today however we are luckier We have generally some basis from previous work so that we can follow a line of research and thus provide even our most fundamental studies with an air of scientific respectability Present day research is rather like the working of a giant crossword puzzle where some of the letters or even words have been completed and the approach toward a relatively confident solution is a matter of juggling a series of permutations I often wonder though how it was for the early brain researchers who had very few letters and even less no words completed in their research puzzles to augment intelligent casual observation By early I refer to nineteenth or early twentieth century investigators men like Cajal Sherrington Pavlov and Sechenov whose investigations did more to advance their field in a span of 50 years than all of the cumulative previous work done on the brain and nervous system since the ancient Greeks      **Dynamics of Brain Edema** Hanna M. Pappius, William Feindel, 2012-12-06 A workshop on Dynamic Aspects of Cerebral Edema was organized to provide an opportunity for interdisciplinary and detailed consideration of this subject so crucial in neurology and neurosurgery The previous workshops were held in Vienna in 1965 and in Mainz in 1972 In the meantime our ideas on mechanisms of resolution of cerebral edema had been changing drastically Controversy had arisen regarding the role of biogenic amines in the development of edema Active work in several centers had indicated the possibility of a reversible component in edematous changes associated with ischemia the control of which could be of therapeutic significance in the problem of stroke It was felt that a thorough discussion at this time by those involved in these various studies should help to resolve the controversies to crystallize the implications of the new findings and to evaluate their application for patient care In preparing the proceedings for publication we have edited the manuscripts and selected the discussions with an aim to highlight new findings to make this volume readable and to eliminate duplication We gratefully acknowledge financial support from the institutions and organizations previously listed Many individuals contributed to the success of the workshop and the preparation of the proceedings for publication Doctors J B Brierley I Klatzo H J Reulen and A G      **Dynamic Neuroscience, Its Application to Brain Disorders** George O.
