Process Dynamics and Control Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Francis J. Doyle, III, 2016-09-13 The new 4th edition of Seborg's Process Dynamics Control provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants Control process instructors can cover the basic material while also having the flexibility to include advanced topics

Dynamics for Process and System Control Wen-Jei Yang, Masami Masubuchi, 1970 May 1991 Control and Optimization with Differential-Algebraic

Constraints Lorenz T. Biegler, Stephen L. Campbell, Volker Mehrmann, 2012-01-01 Differential algebraic equations are the most natural way to mathematically model many complex systems in science and engineering Once the model is derived it is important to optimize the design parameters and control it in the most robust and efficient way to maximize performance This book presents the latest theory and numerical methods for the optimal control of differential algebraic equations The following features are presented in a readable fashion so the results are accessible to the widest audience the most recent theory written by leading experts from a number of academic and nonacademic areas and departments several state of the art numerical methods and real world applications

Dynamics and Nonlinear Control of Integrated Process Systems Michael Baldea, 2012 Presenting a systematic model reduction and hierarchical controller design framework for broad classes of integrated process systems encountered in practice this book first studies process systems with large material recycle and or with small purge streams followed by systems with energy integration Step by step model reduction procedures are developed to derive nonlinear reduced models of the dynamics in each time scale Hierarchical control architectures consisting of coordinated levels of control action in different time scales are proposed for each class of process systems considered to enforce stability tracking performance and disturbance rejection Numerous process applications are discussed in detail to illustrate the application of the methods and their potential to improve process operations MATLAB

codes are also presented to guide further application of the methods developed and facilitate practical implementations

Hierarchical Power Systems Control Marija Ilic, Shell Liu, 2012-12-06 Deregulation is causing dramatic change in the power industry but little is known about how power systems will function under competition What are suitable performance objectives What control designs are required and what economic techniques should be used This detailed analysis attempts to answer these questions The authors provide a modelling analysis and systems control framework that makes it possible to relate distinctive features of the electric power industry to more conventional supply demand processes in other industries Some parts of the system can be distributed while other parts must remain co ordinated This authoritative and detailed study is highly topical and will be of interest to those working in the systems control area especially in electrical power It is also most relevant for industrial economists as well as academics in electrical power engineering

Proceedings of the 8th International Conference on Foundations of Computer-Aided Process Design, 2014-07-14 This volume collects together the presentations at the Eighth International Conference on Foundations of Computer Aided Process Design FOCAPD 2014 an event that brings together researchers educators and practitioners to identify new challenges and opportunities for process and product design The chemical industry is currently entering a new phase of rapid evolution The availability of low cost feedstocks from natural gas is causing renewed investment in basic chemicals in the OECD while societal pressures for sustainability and energy security continue to be key drivers in technology development and product selection This dynamic environment creates opportunities to launch new products and processes and to demonstrate new methodologies for innovation synthesis and design FOCAPD 2014 fosters constructive interaction among thought leaders from academia industry and government and provides a showcase for the latest research in product and process design Focuses exclusively on the fundamentals and applications of computer aided design for the process industries Provides a fully archival and indexed record of the FOCAPD14 conference Aligns the FOCAPD series with the ESCAPE and PSE series
