History and Economic Life Georg Christ, Philipp R. Rössner, 2020-02-27 *History and Economic Life* offers students a wide ranging introduction to both quantitative and qualitative approaches to interpreting economic history sources from the Middle Ages to the Twentieth Century Having identified an ever widening gap between the use of qualitative sources by cultural historians and quantitative sources by economic historians the book aims to bridge the divide by making economic history sources more accessible to students and the wider public and highlighting the need for a complementary rather than exclusive approach Divided into two parts the book begins by equipping students with a toolbox to approach economic history sources considering the range of sources that might be of use and introducing different ways of approaching them The second part consists of case studies that examine how economic historians use such sources helping readers to gain a sense of context and understanding of how these sources can be used The book thereby sheds light on important debates both within and beyond the field and highlights the benefits gained when combining qualitative and quantitative approaches to source analysis Introducing sources often avoided in culturally minded history or statistically minded economic history courses respectively and advocating a combined quantitative and qualitative approach it is an essential resource for students undertaking source analysis within the field

Learning in Non-Stationary Environments Moamar

Sayed-Mouchaweh, Edwin Lughofer, 2012-04-13 Recent decades have seen rapid advances in automatization processes supported by modern machines and computers The result is significant increases in system complexity and state changes information sources the need for faster data handling and the integration of environmental influences Intelligent systems equipped with a taxonomy of data driven system identification and machine learning algorithms can handle these problems partially Conventional learning algorithms in a batch off line setting fail whenever dynamic changes of the process appear due to non stationary environments and external influences *Learning in Non Stationary Environments Methods and Applications* offers a wide ranging comprehensive review of recent developments and important methodologies in the field The coverage focuses on dynamic learning in unsupervised problems dynamic learning in supervised classification and dynamic learning in supervised regression problems A later section is dedicated to applications in which dynamic learning methods serve as keystones for achieving models with high accuracy Rather than rely on a mathematical theorem proof style the editors highlight numerous figures tables examples and applications together with their explanations This approach offers a useful basis for further investigation and fresh ideas and motivates and inspires newcomers to explore this promising and still emerging field of research

Continuous Optimization V. Jeyakumar, Alexander M. Rubinov, 2006-03-09

Continuous optimization is the study of problems in which we wish to optimize either maximize or minimize a continuous function usually of several variables often subject to a collection of restrictions on these variables It has its foundation in the development of calculus by Newton and Leibniz in the 17 century Nowadays continuous optimization problems are widespread

in the mathematical modelling of real world systems for a very broad range of applications Solution methods for large multivariable constrained continuous optimization problems using computers began with the work of Dantzig in the late 1940s on the simplex method for linear programming problems Recent research in continuous optimization has produced a variety of theoretical developments solution methods and new areas of applications It is impossible to give a full account of the current trends and modern applications of continuous optimization It is our intention to present a number of topics in order to show the spectrum of current research activities and the development of numerical methods and applications
