*Innovations in Teaching and Learning for Health Professions Educators* Roger Edwards, Bobbie Ann Adair White, Ardi Findyartini, 2025-06-02

The health professions continue to evolve and change rapidly as more opportunities and challenges emerge. Hence, health professions educators are required to be adaptive and nimble in their creation and adoption of teaching and learning innovations. These innovations have included teaching with technologies like virtual reality, gamification, online applications, and artificial intelligence. Innovations also include know-how such as emotional intelligence and ways of approaching the learning process through student-centered learning experiences grounded in the cognitive science of learning. Scholarship related to identification of the best uses of different innovations is difficult. The same innovations have proven to be engaging in some contexts and burdensome in others. Additionally, simulation-based education continues to incorporate innovations in how health professions educators are taught, with more focus on effectiveness of the simulation educator, including applications with distance simulation. Training and development for health professions and simulation educators is becoming more formalized, yet gaps on effectiveness of training and development efforts persist. Faculty effectiveness, especially as it relates to educational innovation adoption, is difficult to measure, and demonstration of related competencies is in its infancy. The goal of this Research Topic is to bring together state-of-the-art examples of scholarship in health professions education related to the awareness and appropriate adoption of innovation, which is broadly defined as an idea, practice, technology, and know-how. Evidence about the current state of emerging innovations, effectiveness of innovations, and evidence about the competencies needed for teaching in our evolving environments are all areas of interest for this collection. All types of scholarship can support this focus, including analyses based on primary quantitative and qualitative data collection, secondary data analyses, literature reviews, and methodological infrastructure tool development. Additionally, scholarship investigating how these innovations have influenced health professions educators, including their training and development, is part of the goal of the collection. The scope of this collection covers any innovations that are applicable to professional development and implementation for health professions educators. More specifically, we invite scholarship related to how educators prepare themselves for meeting the needs of their students, given the changing roles and innovations available to both faculty and students across learning environments worldwide. Examples of topics of interest include analyses of innovation related to the evolving roles of health professions educators, reviews of educational innovation adoption by health professions education faculty, especially related to artificial

intelligence linked applications Exploring factors associated with professional development training and effective educational innovation adoption by faculty Simulation based educational innovation applications for faculty development Faculty innovation in resource constrained environments in low and middle income countries Methodological challenges associated with studying educational innovations by faculty in health professions education and critical research needs associated with generating and evaluating educational innovations Methodological considerations associated with health professions education faculty competencies Theoretically focused analyses are welcome as long as they are linked to applications The FinTech Revolution Sucharita Gopal, Josh Pitts, 2025-01-06 In a world of unprecedented challenges and opportunities Fintech stands as a pivotal force at the crossroads of technology finance and sustainability This book invites readers to the forefront of a revolutionary convergence where economic growth and environmental stewardship align Whether the reader is a decision maker innovator entrepreneur or investor within the Fintech industry this is a guide to a future where finance and technology serve our planet Authored by experts in GIS AI and remote sensing who are also seasoned entrepreneurs this unique work offers both theory and practical guidance discovers sources often overlooked in ESG analytics dives into specific not general KPIs for industry professionals and navigates global regulations and frameworks with ease Real world case studies unveil the value of applied methods supported by insights from leading practitioners explore the latest developments in AI and machine learning and uncover a step by step data science analysis framework **Modern Endodontics, An Issue of Dental Clinics of North America** Sami M.
