Heating, Cooling, Lighting Norbert Lechner, 2014-10-13 Sustainable environmental control through building design. Heating, Cooling, and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design. By detailing the many factors that contribute to the comfort in a building, this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating, cooling, and lighting. This new fourth edition includes new information on integrated design strategies and designing for the Tropics. Resources include helpful case studies, checklists, diagrams, and a companion website featuring additional cases, an image bank, and instructor materials. Designing buildings that require less energy to heat, cool, and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems. Basic design decisions regarding size, orientation, and form have a great impact on the sustainability, cost, and comfort of a building. Heating, Cooling, and Lighting provides detailed guidance for each phase of a design project. Readers will understand the concept of sustainability as applied to energy sources. Review the basic principles of thermal comfort and the critical role of climate. Learn the fundamentals of solar responsive design, including active and passive solar systems, as well as photovoltaics. Discover how siting, architectural design, and landscaping can reduce the requirements for mechanical and electrical systems. In sustainable design, mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself. With this in mind, designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort. Heating, Cooling, and Lighting is the complete industry leading resource for designers interested in sustainable environmental control.

Earth-sheltered Housing Pauline A. Keehn, 1981 Energy Conservation Update, 1980 Passive and Low Energy Alternatives I Arthur Bowen, Robert Vagner, 2013-10-22 Passive and Low Energy Alternatives I presents the proceedings of the First International PLEA Conference held in Bermuda on September 13-15, 1982, which aims to establish an international forum to report on the developments in the many related topics covered in this fast-growing area of global concern that affects all of mankind. The book covers papers on bioclimatology, design methods and tools, site planning, landscape, and vernacular and indigenous architecture. The text also includes papers on innovative design, retrofits, and renovations, daylighting, earth contact, and greenhouses. Papers on thermal storage, performance, and simulation, social, cultural, economic considerations, and renewable alternatives are also considered. The book further presents papers on passive and hybrid cooling and heating, agricultural applications, and country monographs.
