Earth Systems Processes And Issues:

Earth Systems W. G. Ernst, 2000-03-13 The ideal introductory textbook for any course at the first year university level which touches upon environmental issues or earth systems science **Earth Systems**, 2009 **Governance of Earth Systems** R. Boardman, 2010-07-06 Science and politics are closely connected in today's global environmental issues This book focuses on these links in relation to climate change the threats to wildlife species and natural hazards and disasters Study of these reveals the need for more effective international cooperation and the limits of global governance **Earth System Law: Standing on the Precipice of the Anthropocene** Timothy Cadman, Margot Hurlbert, Andrea C. Simonelli, 2021-12-13 This book systematically explores the emerging legal discipline of Earth System Law ESL challenging the closed system of law and marking a new era in law and society scholarship Law has historically provided stability certainty and predictability in the ordering of social relations predominantly between humans However in recent decades the Earth's relationship in law has changed with increasing recognition of the standing of Mother Earth inherent rights of the environment such as flora and fauna rivers and now recognition of the multiple relations of the Anthropocene This book questions the fundamental assumption that the law only applies to humans and that the earth as a system has intrinsic rights and responsibilities In the last ten years the planet has experienced its hottest period since human evolution and by the year 2100 unless substantive action is taken many species will be lost and planetary conditions will be intolerable for human civilisation as it currently exists Relationships between humans the biosphere and all planetary systems must change The authors address these challenging topics setting the groundwork of ESL to ensure sustainable development of the coupled socio ecological system that the Earth has become Earth System Law is an interdisciplinary and transdisciplinary research project and as such this book will be of great interest to researchers and stakeholders from a wide range of disciplines including political science anthropology economics law ethics sociology and psychology Global Environmental Constitutionalism in the Anthropocene Louis J Kotzé, 2016-09-22 There is persuasive evidence suggesting we are on the brink of human induced ecological disaster that could change life on Earth as we know it There is also a general consensus among scientists about the pace and extent of global ecological decay including a realisation that humans are central to causing the global socio ecological crisis This new epoch has been called the Anthropocene Considering the many benefits that constitutional environmental protection holds out in domestic legal orders it is likely that a constitutionalised form of global environmental law and governance would be better able to counter the myriad exigencies of the Anthropocene This book seeks to answer this central question from the perspective of the Anthropocene what is environmental constitutionalism and how could it be extrapolated to formulate a global framework In answering this question this book offers the first systematic conceptual framework for global environmental constitutionalism in the epoch of the Anthropocene **Encyclopedia of Mathematical Geosciences** B. S. Daya Sagar, Qiuming Cheng, Jennifer McKinley, Frits Agterberg, 2023-07-13 The

Encyclopedia of Mathematical Geosciences is a complete and authoritative reference work. It provides concise explanation on each term that is related to Mathematical Geosciences. Over 300 international scientists, each expert in their specialties, have written around 350 separate articles on different topics of mathematical geosciences, including contributions on Artificial Intelligence, Big Data, Compositional Data Analysis, Geomathematics, Geostatistics, Geographical Information Science, Mathematical Morphology, Mathematical Petrology, Multifractals, Multiple Point Statistics, Spatial Data Science, Spatial Statistics, and Stochastic Process Modeling. Each topic incorporates cross referencing to related articles and also has its own reference list to lead the reader to essential articles within the published literature. The entries are arranged alphabetically for easy access, and the subject and author indices are comprehensive and extensive.

Modeling the Earth System in the Mission to Planet Earth Era Sushel Unninayar, 1993

The Routledge Handbook of Law and the Anthropocene Peter D. Burdon, James Martel, 2023-05-15. The Routledge Handbook of Law and the Anthropocene provides a critical survey into the function of law and governance during a time when humans have the power to impact the Earth system. The Anthropocene is a crisis of the earth system. This book addresses its implications for law and legal thinking in the twenty-first century. Unpacking the challenges of the Anthropocene for advocates of ecological law and politics, this handbook pursues a range of approaches to the scientific fact of anthropocentrism with contributions from lawyers, philosophers, geographers, and environmental and political scientists. Rather than adopting a hubristic normativity, the contributors engage methods, concepts, and legal instruments in a way that underscores the importance of humility and an expansive ethical worldview. Contributors to this volume are leading scholars and future leaders in the field. Rather than upholding orthodoxy, the handbook also problematizes received wisdom and is grounded in the conviction that the ideas we have inherited from the Holocene must all be open to question. Engaging such issues as the Capitalocene, Gaia theory, the rights of nature, posthumanism, the commons, geoengineering, and civil disobedience, this handbook will be of enormous interest to academics, students, and others with interests in ecological law and the current environmental crisis.

Understanding the Earth System Eckart Ehlers, 2001-06-20. Understanding the Earth System aims to contribute to the timely discussion on Global Change of the Earth system. The discussion centers around the synthesis of procedures effecting both the natural and social sciences. The concept of Earth System Analysis, although controversially discussed, will be the focus of future scientific programs related to Global Change. The main problems are overpopulation, water shortages, and climate change.
