

Earthquake resistant buildings

In order to withstand the impact of an earthquake, a building must redistribute its shockwaves. Several design features can handle the side-to-side forces emitted by a quake

Pendulum power: Large ball on steel cables connects to hydraulic system. When building begins to sway, ball acts as pendulum

Window shutters:
Prevent falling glass

Shear walls: High quality concrete reinforced with steel bars

Cross braces: Diagonal supports resist swaying forces

Base isolation: When flexible foundation moves, isolators absorb seismic waves to prevent them from travelling through building

Reinforced steel discs

Lead core

Discs separated by rubber

Cohn, 2012-12-06 These volumes contain the edited documents presented at the NATO Sponsored Advanced Research Workshop ARW on Partial Prestressing from Theory to Practice held at the CEBTP Research Centre of Saint Remy les Chevreuse France June 18-22 1984 The workshop was a direct extension of the International Symposium on Nonlinearity and Continuity in Prestressed Concrete organized by the editor at the University of Waterloo Waterloo Canada July 4-6 1983 The organization of the NATO ARW on Partial Prestressing was prompted by the need to explain and reduce the wide differences of expert opinion on the subject which make more difficult the acceptance of partial prestressing by the profession at large Specifically the workshop attempted to produce a more unified picture of partial prestressing by confronting and where possible reconciling some conflicting American and European views on this subject bring theoretical advances on partial prestressing within the grasp of engineering practice provide the required background for developing some guidelines on the use of partial prestressing in agreement with existing structural concrete standards The five themes selected for the workshop agenda were 1 Problems of Partially Prestressed Concrete PPC 2 Partially Prestressed Concrete Members Static Loading 3 PPC Members Repeated and Dynamic Loadings 4 Continuity in Partially Prestressed Concrete 5 Practice of Partial Prestressing Earthquake-Resistant Design Concepts: an Introduction to the NEHRP Recommended Seismic Provisions for New Buildings and Other Structures (FEMA P-749 / December 2010) Federal Emergency Management Agency, U. S. Department of Homeland Security, National Institute of Building Seismic Safety Council, 2013-01-25 Of the 500 000 or so detectable earthquakes that occur on Planet Earth each year people will feel about 100 000 of them and about 100 will cause damage Although most earthquakes are moderate in size and destructive potential a severe earthquake occasionally strikes a community that is not adequately prepared and thousands of lives and billions of dollars in economic investment are lost For example a great earthquake and the fires it initiated destroyed much of San Francisco in 1906 and a significant portion of Anchorage Alaska was destroyed by a large earthquake in 1964 Within the past 200 years major destructive earthquakes also occurred in Charleston South Carolina and Memphis Tennessee Within the past 50 years smaller but damaging earthquakes occurred several times in both Los Angeles and Seattle Overall more than 20 states have a moderate or high risk of experiencing damaging earthquakes Earthquakes are truly a national problem One of the key ways a community protects itself from potential earthquake disasters is by adopting and enforcing a building code with appropriate seismic design and construction standards The seismic requirements in U S model building codes and standards are updated through the volunteer efforts of design professionals and construction industry representatives under a process sponsored by the Federal Emergency Management Agency FEMA and administered by the Building Seismic Safety Council BSSC At regular intervals the BSSC develops and FEMA publishes the NEHRP National Earthquake Hazards Reduction Program Recommended Seismic Provisions for New Buildings and Other Structures referred to in this publication as the NEHRP Recommended Seismic Provisions or simply the

Provisions The Provisions serves as a resource used by the codes and standards development organizations as they formulate sound seismic resistant design and construction requirements The Provisions also provides design professionals building officials and educators with in depth commentary on the intent and preferred application of the seismic regulations The 2009 edition of the Provisions FEMA P 750 and the building codes and consensus standards based on its recommendations are of necessity highly technical documents intended primarily for use by design professionals and others who have specialized technical training This introduction to the NEHRP Recommended Seismic Provisions is intended to provide these interested individuals with a readily understandable explanation of the intent of the earthquake resistant design and requirements of the Provisions Chapter 1 explains the history and purpose of building regulation in the United States including the process used to develop and adopt the nation s building codes and the seismic requirements in these codes Chapter 2 is an overview of the performance intent of the Provisions Among the topics addressed are the national seismic hazard maps developed by the U S Geological Survey USGS the seismic design maps adopted by the Provisions as a basis for seismic design and seismic risk which is a function of both the probability that a community will experience intense earthquake ground shaking and the probability that building construction will suffer significant damage because of this ground motion Chapter 3 identifies the design and construction features of buildings and other structures that are important to good seismic performance Chapter 4 describes the various types of structures and nonstructural components addressed by the Provisions Chapter 5 is an overview of the design procedures contained in the Provisions Chapter 6 addresses how the practice of earthquake resistant design is likely to evolve in the future A glossary of key technical terms lists of notations and acronyms used in this report and a selected bibliography identifying references that may be of interest to some readers complete this report
