Tidal Friction and the Earth's Rotation Peter Brosche, 2013-12-01 P Brosche The development of the ideas and observational techniques related to the subject of our meeting Tidal friction and the Earth's rotation Bielefeld September 1977 is one of the most fascinating books not merely chapters of the modern history of science Its genealogical tree is as intricate as that of mankind itself There are dead ends and superfluous re discoveries Due to these circumstances and to the pure extent of the topic it is impossible to give more than a few highlights here The first relevant observational fact was discovered by the famous English astronomer E Halley in 1695 Berry 1961 He simply could not arrive at an agreement between ancient and recent eclipses using a constant mean angular motion of the Moon Instead he had to introduce an empirical acceleration term in the mean motion Known as the secular acceleration it has ever since been a most challenging subject of celestial mechanics and a main branch of the genealogical tree already mentioned In 1754 completely independently and almost certainly in ignorance of those specialists activities the German philosopher Kant established the idea of tidal friction as a decelerating mechanism for the rotation of the Earth Felber 1974 Although he made some errors in his rough computations the majority of the constitutive elements of his concept have survived to the present day Brosche 1977

Tidal Friction and the Earth's Rotation II P. Brosche, Jürgen Sündermann, 2012-12-06 In the four years which elapsed between our first workshop on Tidal Friction and the Earth's Rotation and the second the proceedings of which are presented here many of the disciplines involved made advances which we felt should be exchanged We were encouraged by the good reception our first report met with Of course more insight often means more problems Therefore this volume contains new results and revisions of matters which previously appeared settled We are certainly far from final answers For this reason differing opinions on some issues are to be found in this book Moreover we have refrained from making mathematical symbols uniform to avoid the risk of errors and non compatibility with the earlier work of an author The two workshops have stimulated collaboration between participants working in various fields The final versions of the contributions have already profited from these discussions We are convinced that they will also influence further investigations This advancement of our past and future aims is based on the very existence of the Centre for Interdisciplinary Studies and on the support we have received from its leading members The authors have agreed to dedicate this book to Dr H Gerstenkorn who died in 1981 He contributed fundamental ideas to the scientific fields treated in the meeting P Brosche Daun September 1982 J Sündermann Contents Julius Robert Mayer's Ideas on a Theory of Tidal Friction H P Miinzenmayer

Developments in Astrometry and Their Impact on Astrophysics and Geodynamics Ivan I. Mueller, Barbara Kolaczek, 2013-12-01 In this review talk I would like to report on the proper motion analysis which has been recently carried out together with M Soma and M Yoshizawa There has been a persistent demand in astronomy for accurate stellar positions

and proper motions which are represented by an inertial reference system constructed on the basis of a set of consistent astronomical constants. In the reference system the precessional constant plays a primary role. In a series of papers Fricke 1967a, b 1977a, b has determined the luni solar precessional correction to Newcomb's value and the fictitious motion of the equinox which have been adopted in the IAU 1976 System of Astronomical Constants. Based on the precessional correction and the equinoctial motion thus established the fundamental reference system the FK5 system Fricke et al 1988 for positions and proper motions has been constructed. However for several years geodetic VLBI McCarthy Luzum 1991 and LLR Williams et al 1991 observations have been suggesting an additional correction to the luni solar precessional constant of the IAU 1976 System. That is these observations indicate the precessional correction of 6 p 0 30 cent to the FK5 system. But the observational period of the earth orientation is considered to be still insufficient to separate unambiguously the precessional change of the earth orientation from the nutation with the longest period of 18 6 years. Treatise on Geophysics, Volume 9 David Stevenson, 2010-05-18. Evolution of the Earth focuses on the formation of Earth. Topics include the differentiation of the core, mantle and crust; the formation of the ocean basins and continents; outgassing and volcanism; the initiation of plate tectonics; the origin and persistence of Earth's magnetic field; the growth of the inner core; changes in mantle convection through time; and the impact of life on the planet. The volume takes an interdisciplinary viewpoint that emphasizes the interplay of geophysics, other aspects of earth science and biological evolution. Some outstanding questions are identified and debated. Self contained volume starts with an overview of the subject then explores each topic with in depth detail. Extensive reference lists and cross references with other volumes to facilitate further research. Full color figures and tables support the text and aid in understanding. Content suited for both the expert and non expert. IAG 150 Years Chris Rizos, Pascal Willis, 2016-08-08. This proceedings contains a selection of peer reviewed papers presented at the IAG Scientific Assembly Postdam Germany 1 6 September 2013. The scientific sessions were focussed on the definition, implementation and scientific applications of reference frames; gravity field determination and applications; the observation and assessment of earth hazards. It presents a collection of the contributions on the applications of earth rotations dynamics on observation systems and services as well as on imaging and positioning techniques and its applications. **Geophysical Journal of the Royal Astronomical Society**, 1981 Vols 11 and 13 includes the Proceedings of the 2nd 3rd International Symposium on Geophysical Theory and Computers Rehovoth Israel etc 1965 66. **Multiple Taper Spectral Analysis of Earth Rotation Data** Nancy Ellen King, 1990. **Treatise on Geophysics**, 2015-04-17. Treatise on Geophysics Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously. Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics. A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution.

Additional features include new material in the Planets and Moon Mantle Dynamics Core Dynamics Crustal and Lithosphere Dynamics Evolution of the Earth and Geodesy volumes New material is also presented on the uses of Earth gravity measurements This title is essential for professionals researchers professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state of the art discussions of all research topics Integration of topics into a coherent whole

Atmospheric Effects in Space Geodesy Johannes Böhm, Harald Schuh, 2013-06-12 Various effects of the atmosphere have to be considered in space geodesy and all of them are described and treated consistently in this textbook Two chapters are concerned with ionospheric and tropospheric path delays of microwave and optical signals used by space geodetic techniques such as the Global Navigation Satellite Systems GNSS Very Long Baseline Interferometry VLBI or Satellite Laser Ranging SLR It is explained how these effects are best reduced and modelled to improve the accuracy of space geodetic measurements Other chapters are on the deformation of the Earth's crust due to atmospheric loading on atmospheric excitation of Earth rotation and on atmospheric effects on gravity field measurements from special satellite missions such as CHAMP GRACE and GOCE All chapters have been written by staff members of the Department of Geodesy and Geoinformation at TU Wien who are experts in the particular fields *Proceedings - Institut Teknologi Bandung*, 1992
