Easy Guide To Factor Analysis:

An Easy Guide to Factor Analysis Paul Kline, 2014-02-25 Factor analysis is a statistical technique widely used in psychology and the social sciences. With the advent of powerful computers, factor analysis and other multivariate methods are now available to many more people. **An Easy Guide to Factor Analysis** presents and explains factor analysis as clearly and simply as possible. The author, Paul Kline, carefully defines all statistical terms and demonstrates step by step how to work out a simple example of principal components analysis and rotation. He further explains other methods of factor analysis, including confirmatory and path analysis, and concludes with a discussion of the use of the technique with various examples. **An Easy Guide to Factor Analysis** is the clearest, most comprehensible introduction to factor analysis for students. All those who need to use statistics in psychology and the social sciences will find it invaluable. Paul Kline is Professor of Psychometrics at the University of Exeter. He has been using and teaching factor analysis for thirty years. His previous books include *Intelligence: the psychometric view* (Routledge, 1990) and *The Handbook of Psychological Testing* (Routledge, 1992). **An Easy Guide to Factor Analysis** Paul Kline, 1994

Assessing Soldier Individual Differences to Enable Tailored Training, 2010 The operational tempo of the United States Army has increased dramatically placing a premium upon quality of training For decades researchers have explored the extent to which training quality can be improved by tailoring training defined as assessing learning relevant individual differences and assigning learners to optimal learning conditions based on those differences Before informed tailored training in U S Army institutional settings can take place researchers must know what individual differences IDs are related to course performance Instructors from the Warrant Officer Candidate School WOCS at Fort Rucker Alabama were interviewed to determine what IDs in their experience predict academic success in the WOCS course Based on those interviews three IDs dimensions initiative attention to detail and metacognition were chosen Other IDs were selected by the research team on the basis of hypothesized relationships between experience and course

demands A set of instruments measuring those IDs as well as demographic information was constructed and given to the instructors to review Upon instructor approval the packet was administered to a 5 week and a 7 week WOCS class total n 157 The student responses were then statistically compared with end of course grades to determine the predictive validity of the instruments For the 5 week class only one demographic variable and none of the instructor provided IDs correlated with academic performance For the 7 week class two of the demographic items and two of the instructor provided IDs predicted academic performance However correlations between the predictor and criterion variables would have to be stronger to serve as a basis for tailoring training On the other hand the demographic items are easy to administer and the gain in prediction may be judged worth the effort Possible reasons for the moderate predictive power of the individual differences are proposed DTIC Psychological Testing Robert M.
