Implementing Sustainable Development Hussein Abaza, Andrea Baranzini, 2002

Decision makers increasingly seek to design environmental and development policies that will support sustainable development Thus practical tools to help formulate sustainable development policies and clear methods to assess their acceptability and effectiveness are urgently needed This book contributes to meeting these needs by presenting both analytical and empirical aspects of decision making processes The authors explore the methods for integrating environmental and social sciences to support participatory policy design implementation and assessment of sustainable development policies These methods are applied richly illustrated and discussed with reference to several case studies from various

regions of the world Although each chapter has a distinct focus they all contribute to a clearer understanding of how sustainable development is perceived and assessed by society The book is interdisciplinary emphasising how the integration of a wide set of disciplines and stakeholder perspectives into the policy making process can help to improve the perception of sustainable development policies The authors argue that there should be greater transparency in the processes of modelling and integrated assessment in order to increase the meaningful participation of all stakeholders involved in the decision making process By deliberately avoiding technical jargon this book will appeal to a broad audience including environmental resource and development economists It will also be of interest to anyone with a scientific or policy perspective in the measurement and assessment of sustainable development *Governance of Earth Systems* Robert Boardman, 2010-07-07

Science and politics are closely connected in today's global environmental issues This book focuses on these links in relation to climate change the threats to wildlife species and natural hazards and disasters Close study of these links of these reveals the need for more effective international cooperation and the limits of global governance

Socioecological Transitions and Global Change Marina Fischer-Kowalski, Helmut Haberl, 2007 This significant new book analyses fundamental changes in society nature interaction the socioeconomic use of materials energy and land The volume presents a number of case studies addressing transitions from an agrarian to an industrial socioecological regime analysed within the materials and energy flow accounting MEFA framework It is argued that by concentrating on the biophysical dimensions of change in the course of industrialization social development issues can be explicitly linked to changes in the natural environment From the historical transition in Europe to current transitions in developing countries the book offers a broad and comprehensive analysis of transition processes across scales from local to national The comparison of historical and current assessments allows a theory of the underlying patterns of the agrarian industrial transition to emerge On this basis future trends and possible pathways towards or indeed further departures from sustainability are discussed Empirical in character and cautious in its assumptions this insightful book provides rich and in depth material for further studies in socioecological research It will be essential reading for students and researchers of ecological economics industrial ecology human ecology environmental sociology environmental history geography as well as land energy and development studies

Economic Theories of International Environmental Cooperation Carsten Helm, 2000 This study begins with a normative analysis based on fair division theory and welfare theory It then extends the perspective by taking into account the self interest of sovereign states Finally Carsten Helm applies non cooperative game theory to analyze issues such as emissions trading
