The Earth The Earth Today. A Collection of Papers Dedicated to Sir Harold Jeffreys, Etc Harold Jeffreys, 1961 **Today** Royal Astronomical Society, 1961 The Earth Today Royal Astronomical Society, 1961 **Surge Tectonics: A New** Hypothesis of Global Geodynamics Arthur A. Meyerhoff, I. Taner, A.E.L. Morris, W.B. Agocs, M. Kamen-Kaye, Mohammad I. Bhat, N. Christian Smoot, Dong R. Choi, 1996-08-31 TECTONICS AND PHYSICS Geology although rooted in the laws of physics rarely has been taught in a manner designed to stress the relations between the laws and theorems of physics and the postulates of geology The same is true of geophysics whose specialties seismology gravimetly magnetics magnetotellurics deal only with the laws that govern them and not with those that govern geology s postulates. The branch of geology and geophysics called tectonophysics is not a formalized discipline or subdiscipline and therefore has no formal laws or theorems of its own Although many recent books claim to be textbooks in tectonophysics they are not they are books designed to explain one hypothesis just as the present book is designed to explain one hypothesis. The textbook that comes closest to being a textbook of tectonophysics is Peter 1 Wyllie's 1971 book The Dynamic Earth Teachers students and practitioners of geology since the very beginning of earth science teaching have avoided the development of a rigorous but not rigid scientific approach to tectonics largely because we earth scientists have not fully understood the origin of the features with which we are dealing This fact is not at all surprising when one considers that the database for hypotheses and theories of tectonics particularly before 1960 has been limited to a small part of the exposed land area on the Earth's surface Supplements to the Monthly Notices of the Royal Astronomical Society ,1928 **Our Concept of the Earth** Lapo Boschi, 2025-01-25 With its new unique look at the physics of the earth and at how this field got to where it is today this is not a conventional textbook but could easily be used as one Designed to be understood by readers with no background in the earth sciences and only little previous knowledge of math and physics Our Concept of the Earth differs from other geophysics books in that it places geo scientific concepts in their historical context ideas are presented in chronological order according to the moment they emerged one in response to the other throughout the history of the discipline In this way the material covered in any given section of the book rests on simpler previously established concepts that are explained earlier in the book The book is extremely self contained and lends itself to being read from beginning to end an experience that will captivate and even entertain a broad range of readers in academia and beyond Classed Subject Catalog Engineering Philosophical Magazine ,1916 The London, Edinburgh and Dublin Philosophical Societies Library, 1963 Magazine and Journal of Science ,1926 General Catalogue of Printed Books British Museum.
