Earthquakes Induced By Underground Nuclear Explosions Environmental And Ecological Problems:

Earthquakes Induced by Underground Nuclear Explosions Rodolfo Console, Aleksei Vsevolodovich Nikolaev, 1995
This volume presents different studies carried out on induced seismicity both from experimental and theoretical viewpoints. Several examples of seismic activity induced by underground nuclear explosions, impoundment of artificial reservoirs and mining activities are given and discussed. Another important subject which is covered is earthquakes induced by other large earthquakes. Further tectonic stress release in the immediate vicinity of an underground nuclear explosion is treated. The release produces aftershocks of small magnitude usually for several weeks occurring a few kilometers within the shot point. This phenomenon is of importance in the context of monitoring a Comprehensive Test Ban Treaty. Earthquakes Induced by Underground Nuclear Explosions R. Console, A. Nikolaev, NATO Scientific Affairs Division, 1995

Ultra and Extremely Low Frequency Electromagnetic Fields Vadim Surkov, Masashi Hayakawa, 2014-07-08
The major emphasis of this book is on physical mechanisms and sources of the ULF ELF natural electromagnetic fields and noises. In the course of this text some of these mechanisms of magnetospheric origin will be treated in detail and others in a more sketchy fashion while the global electromagnetic resonances excited by lightning activity and other sources are the priority. The interested reader is referred to the books cited in the text for details about the ULF ELF fields of magnetospheric origin. Much emphasis is put on studies of electromagnetic phenomena caused by rock deformation fracture including the ULF ELF effects possibly associated with tectonic activity, earthquakes and other natural disasters. One of the challenges of this research is to fully understand electromagnetic effects and physical processes in the rocks deep in the Earth's crust.
