AI Chatbots in Customer Service Evgeny Kagan, Maqbool Dada, Brett Hathaway, 2022 Despite recent advances in language processing algorithms chatbot technology continues to face adoption hurdles We survey chatbot users about their experiences and use their testimonies to construct a decision model of customer choice between the chatbot service channel and the live agent service channel The fundamentals of this choice are the time spent in line and in service the chatbot's success rate and the qualitative differences in the service experience provided by the chatbot and by the live agent We then conduct experiments in which participants choose and then experience the chatbot or the live agent channel as we vary operational i.e. times spent and chatbot success rates and qualitative features of the chatbot We find that users respond positively to improvements in chatbot operational performance however the chatbot channel remains underutilized relative to what expected time minimization would predict Additional experiments show that this underutilization is caused by two separate mechanisms algorithm aversion aversion to an algorithmic service provider and gatekeeper aversion aversion to any service format that may involve multiple stages Examining potential remedies we find that algorithm aversion can be mitigated by making salient the expected time savings offered by the chatbot However gatekeeper aversion is more persistent and harder to overcome We conclude by building and estimating a structural model of channel demand and by proposing a behavior aware service design that reduces the firm's staffing costs by up to 22%
