## **Distributed Constraint Logic Programming:**

**Distributed Constraint Logic Programming** Ho-Fung Leung, 1993 This book presents the first attempt to combine concurrent logic programming and constraint logic programming. It is divided into three parts. In the first part a novel computation model called the multi Pandora model which is designed on the basis of the Pandora model is presented. In the second part the distributed implementation schemes for Parlog Pandora and multi Pandora are presented. Finally the author presents the distributed constraint solvers for finite domain constraints as well as the distributed constraint solvers in the domains of real numbers and Boolean rings which can be incorporated into the schemes presented in the second part to handle the ask and tell constraints.

**Recent Advances in Constraints** Angelo Oddi, François Fages, Francesca Rossi, 2009-07-28 This book constitutes the thoroughly refereed and extended post workshop proceedings of the 13th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming CSCLP 2008 held in Rome Italy in June 2008. The 9 revised full papers presented were carefully reviewed and selected from 14 initial submissions. The papers in this volume present original research results as well as applications in many aspects of constraint solving and constraint logic programming. Research topics that can be found in the papers are: first order constraints, symmetry breaking, global constraints, constraint optimization problems, distributed constraint solving problems, soft constraints as well as the analysis of application domains such as cumulative resource problems and hybrid systems.

Chapters: Decomposition method, Local consistency, Constraint logic programming, Complexity of constraint satisfaction, Distributed constraint optimization, Backjumping, Constraint satisfaction problem, Difference map algorithm, Reasoning system, Satisfiability, Modulo Theories, Constraint programming, Concurrent constraint logic programming, Constraint satisfaction dual problem, Local search, Constraint learning, DPLL algorithm, Hybrid algorithm, Look ahead, ECLiPSe, Min conflicts algorithm, Constraint Handling Rules, SWI Prolog, AC 3 algorithm, Natural Constraint Language, Allen's Interval Algebra, Ordered graph, Region connection calculus, Constraint Composite Graph, Davis Putnam algorithm, WalkSAT, Backmarking, Spatial temporal reasoning, Schaefer's dichotomy theorem, Beaver bit vector decision procedure, Mixed Set Programming, Constraint inference, Hidden transformation, Nurse scheduling problem, GNU Prolog, Gecode, Consensus dynamics, Constraint graph, Cassowary, Hierarchical constraint satisfaction, JaCoP, Chaff algorithm, Barrier function, Basis pursuit, Binary constraint, Kaleidoscope, Minion, Regular constraint, CHIP. Excerpt: In constraint satisfaction a decomposition method translates a constraint satisfaction problem into another constraint satisfaction problem that is binary and acyclic. Decomposition methods work by grouping variables into sets and solving a subproblem for each set. These translations are done because solving binary acyclic problems is a tractable problem. Each structural restriction defined a measure of complexity of solving the problem. After conversion this measure is called width. Fixing a maximal allowed width is

a way for identifying a subclass of constraint satisfaction problems Solving problems in this class is polynomial for most decompositions if this holds for a decomposition      Recent Advances in Constraints Javier Larrosa, Barry O'Sullivan, 2011-03-16 This book constitutes the thoroughly refereed post proceedings of the 14th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming CSCLP 2009 held in Barcelona Spain in June 2009 The 9 revised full papers presented were carefully reviewed and selected for inclusion in this post proceedings The papers in this volume present original research results and applications of constraint solving and constraint logic programming in several domains Among the issues addressed are solving argumentation frameworks software consistency modeling languages static design routing dynamic constraint satisfaction and constraint based modeling      **Principles and Practice of Constraint Programming - CP 2001** Toby Walsh, 2003-06-30 This book constitutes the refereed proceedings of the 7th International Conference on Principles and Practice of Constraint Programming CP 2001 held in Paphos Cyprus in November December 2001 The 37 revised full papers 9 innovative applications presentations and 14 short papers presented were carefully reviewed and selected from a total of 135 submissions All current issues in constraint processing are addressed ranging from theoretical and foundational issues to advanced and innovative applications in a variety of fields

on Principles and Practice of Declarative Programming ,2004      **ACM Transactions on Programming Languages and Systems** Association for Computing Machinery,2001      **Handbook of Constraint Programming** Francesca Rossi,Peter van Beek,Toby Walsh,2006-08-18 Constraint programming is a powerful paradigm for solving combinatorial search problems that draws on a wide range of techniques from artificial intelligence computer science databases programming languages and operations research Constraint programming is currently applied with success to many domains such as scheduling planning vehicle routing configuration networks and bioinformatics The aim of this handbook is to capture the full breadth and depth of the constraint programming field and to be encyclopedic in its scope and coverage While there are several excellent books on constraint programming such books necessarily focus on the main notions and techniques and cannot cover also extensions applications and languages The handbook gives a reasonably complete coverage of all these lines of work based on constraint programming so that a reader can have a rather precise idea of the whole field and its potential Of course each line of work is dealt with in a survey like style where some details may be neglected in favor of coverage However the extensive bibliography of each chapter will help the interested readers to find suitable sources for the missing details Each chapter of the handbook is intended to be a self contained survey of a topic and is written by one or more authors who are leading researchers in the area The intended audience of the handbook is researchers graduate students higher year undergraduates and practitioners who wish to learn about the state of the art in constraint programming No prior knowledge about the field is necessary to be able to read the chapters and gather useful knowledge Researchers from other fields should find in this handbook an effective way to learn about constraint programming and to possibly use some of the constraint programming concepts and techniques in their work thus providing a means for a fruitful cross fertilization among different research areas The handbook is organized in two parts The first part covers the basic foundations of constraint programming including the history the notion of constraint propagation basic search methods global constraints tractability and computational complexity and important issues in modeling a problem as a constraint problem The second part covers constraint languages and solver several useful extensions to the basic framework such as interval constraints structured domains and distributed CSPs and successful application areas for constraint programming Covers the whole field of constraint programming Survey style chapters Five chapters on applications      Mathematical Reviews ,2005
