Dividing Sea:

Duration of the Several Mitotic Stages in the Dividing Root-tip Cells of the Common Onion Harry Hamilton Laughlin, 1919

Biomechanics of Cell Division Nuri Akkas, 2013-03-09 There are virtually hundreds of life scientists publishing hundreds of papers a year on numerous aspects of the cell cycle. The following are few of the topics covered: cell membrane organization, membrane components, cytoskeleton and associated proteins, cell motility, actin in dividing cells, surface modulating assemblies, microfilaments, microtubules, cleavage furrow, fusion, etc. In all these topics, life scientists talk about, among others, the forces within the system, the motion within the system, and the failure of the system. The concepts of force, motion, and failure are one way or another all related to the structure of the cell and to the mechanics of the cell activities. When the concepts of mechanics and structure enter the problem, then one has to talk about biomechanics. In this case, biomechanics of cytology, which we would like to call cytomechanics. However, a review of the journals, books, and conference proceedings related to various aspects of cytology reveals that mechanicians have not yet entered the field of cytology at a noticeable level. Some life scientists have indeed made use of the general principles of mechanics in their works; however, no truly interdisciplinary publication has yet appeared from the collaboration of mechanicians and life scientists in the field of, for instance, cell division.

Mitosis/Cytokinesis Arthur Zimmerman, 2012-12-02 Mitosis/Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis as studied from different points of view by various authors. The book summarizes work at different levels of organization, including phenomenological, molecular, genetic, and structural levels. The book is divided into three sections that cover the premeiotic and premitotic events, mitotic mechanisms, and approaches to the study of mitosis and mechanisms of cytokinesis. The authors used a uniform style in presenting the concepts by including an overview of the field, a main theme, and a conclusion so that a broad range of biologists could understand the concepts. This volume also explores the potential developments in the study of mitosis and cytokinesis, providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology. The book is an excellent reference for students, lecturers, and research professionals in cell biology, molecular biology, developmental biology, genetics, biochemistry, and physiology.
