Dead Roots:

Standard Soil Methods for Long-term Ecological Research G. P. Robertson, 1999 The goal of the volume is to facilitate cross site synthesis and evaluation of ecosystem processes The book is the first broadly based compendium of standardized soil measurement methods and will be an invaluable resource for ecologists agronomists and soil scientists BOOK JACKET

Applications of Continuous and Steady-State Methods to Root Biology John G. Torrey, Lawrence J. Winship, 2012-12-06 This book provides an excellent illustration of the interrelationship between progress in scientific methodology and conceptual advances and its publication should contribute to further advances It is well known that major advances in understanding often follow the development of new methods The development of the acetylene reduction assay for nitrogenase activity provides a good example of this interrelationship between theory and methods Theoretical knowledge led to a search for substrates for nitrogenase that could be assayed for more easily than ammonium the normal product of the enzyme The discovery of the reduction of acetylene to ethylene by nitrogenase provided the ideal answer to the problem by providing a rapid specific nondestructive and inexpensive assay for nitrogenase activity This assay is now used by almost every laboratory doing research on nitrogen fixation However further use and development of the acetylene reduction assay has shown that it can underestimate nitrogenase activity and can even give incorrect relative values under some circumstances The major problem is that exposure of legume nodules to acetylene can cause a large increase in the resistance to oxygen diffusion into the nodule This reduced supply of oxygen decreases the rate of nitrogenase activity within a few minutes Proceedings of IPSC 2019 - 2nd International Plant Spectroscopy Conference Lisbeth Garbrecht

Böhm, 2012-12-06 Root research under natural field conditions is still a step child of science The reason for this is primarily methodological The known methods are tedious time consuming and the accuracy of their results is often not very great Many research workers have been discouraged by doing such root studies The need for more information on the development and distribution of plant roots in different soils under various ecological conditions is however obvious in many ecological disciplines Especially the applied botanical sciences such as agriculture horticulture and forestry are interested in obtaining more data on plant roots in the soil This book will give a survey of existing methods in ecological root research Primarily field methods are presented techniques for pot experiments are described only so far as they are important for solving ecological

problems Laboratory methods for studying root physiology are not covered in this book Scientific publications on roots are scattered in many different journals published all over the world By working through the international root literature I found that about ten thousand papers on root ecology have been published at the present This is not very much compared with the immense literature on the aboveground parts of the plants but is however too much to cite in this book Memoir,1913

Biodiversity in Dead Wood Jøgeir N. Stokland, Juha Siitonen, Bengt Gunnar Jonsson, 2012-04-26 Fossils document the existence of trees and wood associated organisms from almost 400 million years ago and today there are between 400 000 and 1 million wood inhabiting species in the world This is the first book to synthesise the natural history and conservation needs of wood inhabiting organisms Presenting a thorough introduction to biodiversity in decaying wood the book studies the rich diversity of fungi insects and vertebrates that depend upon dead wood It describes the functional diversity of these organisms and their specific habitat requirements in terms of host trees decay phases tree dimensions microhabitats and the surrounding environment Recognising the threats posed by timber extraction and forest management the authors also present management options for protecting and maintaining the diversity of these species in forests as well as in agricultural landscapes and urban parks **Annual Report** New York State College of Agriculture and Life Sciences, 1914 The Action of Certain Nutrient and Non-nutrient Bases on Plant Growth Merris Mickey McCool, 1913 **Monographs** Bryn Mawr College, 1904 *Memoir - Cornell University Agricultural Experiment Station* Cornell University.
