Proven Ai Slideshow Maker For Students:

Designing Instruction with Generative AI Brent A. Anders, 2025-09-16 Designing Instruction with Generative AI offers a novel set of tools and strategies for leveraging generative AI to create engaging and personalized learning experiences. While instructional designers are a tremendous asset to higher education, not all colleges or universities have the robust staff needed to support all instructors on staff or large student populations. Drawing on a wealth of research, professional experience, and strategic insights, this book equips new and seasoned teaching faculty and trainers with step-by-step directions on how freely accessible artificial intelligence software can assist with all aspects of the course creation and instruction process and cater to the needs of diverse learners. Each chapter offers forward thinking and empirically validated ways to help faculty create and improve instructional materials, course design, and learning environments while supporting their digital literacies. Rather than introduce AI as a means of outsourcing subject area expertise, critical thinking, or cognitive processes, the author instead emphasizes its potential to build on traditionally honed knowledge and foundational instructional design practices. From optimizing course alignment and accessibility practices to fostering active learning, motivation, and engagement, educators will find new solutions to common teaching and learning challenges with greater efficiency in time and capacity. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.

Teaching with Artificial Intelligence Stamatis Papadakis, 2025-11-20 This book brings together global experts to explore the transformative potential of artificial intelligence (AI) in early childhood and primary education. Through a combination of theoretical insights and practical case studies, it examines how AI technologies can enrich learning, empower educators, and address key challenges from the evolving needs of young learners to ethical considerations, digital equity, and teacher preparedness. Topics covered in the book include AI-assisted bilingual language development, robot-supported pedagogy, generative AI integration, and AI-driven assessment tools. Through real-world examples and research-based strategies, the book demonstrates how AI can support personalized learning, foster creativity, and improve educational outcomes without replacing the vital role of teachers. It encourages educators to engage with AI in a confident and critical manner, offering guidance on implementation while maintaining a strong focus on inclusion, child development, and responsible practice. Written in clear, accessible language, this book is a practical guide to the opportunities and challenges of AI-enhanced education in the years ahead. This timely resource will appeal to educators, researchers, and students of educational technology, early childhood education, and primary education, as well as policy professionals interested in understanding how to meaningfully integrate AI into early learning environments.
