Advances in Rapid Sex-Steroid Action Gabriella Castoria,Antimo Migliaccio,2011-12-15 Breast and prostate cancers are both hormone dependent at least in some stages of their progression Hormonal manipulation represents an important therapeutic approach Although most of breast and prostate cancers initially respond to hormone

therapy most tumors reinitiate to growth Finally hormone resistant and metastatic breast and prostate cancers may develop Thus the challenge is the dissection of mechanisms by which steroid receptor signaling pathways continue to influence cell growth and invasiveness Compelling evidence indicates that steroid hormones elicit non genomic responses in extra nuclear compartment of target cells In this cellular location steroid coupled receptors rapidly recruit signaling effectors or scaffold proteins and activate multiple pathways leading to proliferation survival migration and invasiveness The immediate challenge is the dissection of key events regulating the steroid response of target tissues to prevent progression and improve treatment of breast and prostate cancers

Remme, 2013-06-03 Cardiac arrhythmias secondary to hereditary genetic disorders are increasingly recognized as a cause for sudden cardiac death in the general population Mutations in a large number of genes encoding ion channels and proteins involved in cell cell coupling have been identified in affected patient populations Furthermore genetic defects in other proteins directly or indirectly influencing cardiac electrophysiological properties have been shown to be involved In depth studies of the mechanisms underlying the observed electrophysiological abnormalities are often limited in patients carrying these mutations Transgenic mouse models incorporating the genetic defect in question have been successful in studying

genotype phenotype correlations and have provided important insight into the underlying electrophysiological biophysical and molecular mechanisms In this Research Topic Issue an overview is presented of the knowledge and insight obtained from various transgenic models of cardiac electrophysiology so far and how further research in this field may be of additional benefit for the future identification risk stratification and treatment of patients with inherited cardiac arrhythmias and sudden death *InCider* ,1989-07 **Broadcasting** ,1959 *Musical America* ,1916 Genome Research ,2008 **The Journal of Infectious Diseases** ,1995-04 *Social Science Abstracts* ,1931 The New Yorker ,2008 *Soviet Genetics* ,1990
