Current Topics in Nonclinical Drug Development Philip Bentley, Pritam S. Sahota, Zbigniew Wojcinski, 2023-11-09

The second volume in the CURRENT TOPICS IN NONCLINICAL DRUG DEVELOPMENT SERIES explores the critical issues and current topics in nonclinical drug development. This second volume covers individual topics and strategies in drug development from compound characterization to drug registration. Written by a variety of experts in the field, recent and rapid advances in technologies and associated changes in regulatory guidance are discussed. Select topics include: Evolution of Artificial Intelligence (AI) technologies and the impact on toxicologic pathology; Current approaches to carcinogenicity testing; Predicting drug-drug interactions; Current understanding of idiosyncratic drug reactions; Assessing cardiovascular risks beyond QT interval; Use of 3D cell cultures in toxicology and ADME; Development of small molecule antibody complexes; Differentiating adverse from non-adverse findings in nonclinical studies. *Current Topics in Nonclinical Drug Development Volume 2* will aid toxicologists, toxicologic pathologists, consultants, regulators, study directors, and nonclinical scientists dealing with day-to-day issues encountered in drug development and assist in formulating strategies for resolution of these issues. In addition, the book will be a valuable reference for academicians and graduate students pursuing research related to nonclinical drug development.

Case Studies in Innovative Clinical Trials Kristine Broglio, Binbing Yu, 2023-11-27

Drug development is a strictly regulated area. As such, marketing approval of a new drug depends heavily, if not exclusively, on evidence generated from clinical trials. Drug development has seen tremendous innovation in science and technology that has revolutionized the treatment of some diseases. And yet, the statistical design and practical conduct of the clinical trials used to test new therapeutics for safety and efficacy have changed very little over the decades. Our approach to clinical trials is steeped in convention and tradition. The large, fixed, randomized controlled trial methods that have been the gold standard are well understood and expected by many trial stakeholders. However, this approach is not well suited to all aspects of modern drug development and the current competitive landscape. We now see new therapies that target a small fraction of the patient population: rare diseases with high unmet medical needs and pediatric populations that must wait for years for new drug approvals from the time that therapies are approved in adults. Large randomized clinical trials are at best inefficient and at worst completely infeasible in many modern clinical settings. Advances in technology and data infrastructure call for innovations in clinical trial design. Despite advances in statistical methods, the availability of information and computing power, the actual experience with innovative design in clinical trials across industry and academia is limited. This book will be an important showcase of the potential for these innovative designs in modern drug development and will be an important resource to guide those who wish to undertake them for themselves. This book is ideal for professionals in the pharmaceutical industry and regulatory agencies but it will also be useful to academic researchers, faculty members, and graduate students in statistics, biostatistics, public health, and epidemiology due to its focus on innovation.
